Hiring Team, Bishop Fox

At Sensata, the hardest part of launching new sensing products was never the launch date, it was turning technical capability into a story an OEM buyer and a procurement team could both believe. I wrote the positioning that did that, drove $2M+ in first-year revenue, and built the battlecards and case studies that lifted a 50-rep sales team's win rate 30%. Your posting describes a sharper version of that same job: take offensive-security expertise that only makes sense to the person who built it, and turn it into content a buyer trusts enough to act on.

Research comes before the writing, not after. I ran 30+ customer interviews with OEM and distributor buyers to find where a pitch was landing and where it wasn't, then segmented what I heard into the positioning calls that followed, including a 22-point lift in CSAT once the roadmap reflected what customers actually asked for. I ran the same process at Plug Power, where customer research cut cost per acquisition 15% and lifted conversion 20%. Different buyer, different stakes, same discipline: find the real objection before a rep hears it live, and have the material ready when they do.

I partner with executives directly rather than working from a finished brief. At Sensata I shaped multimillion-dollar customer quotes and revenue narratives alongside senior leadership, and I directed a 5-person team through a market-sizing and positioning project for Safran when the ask was still taking shape and nobody had scoped it for me first. I am Strategic Marketing III at Applied Materials now, where I clear repetitive market-sizing work with AI agents built on Claude, and I built an AI job-matching platform end to end on the OpenAI API, so the AI and LLM side of your roadmap would not be new territory.

I would welcome the chance to talk through how that launch-to-enablement motion maps onto Bishop Fox's offerings. Proof trail at adhi-product-ai.vercel.app/ref/bishop-fox.
