Hiring Team, WisdomAI

Your posting asks for someone who can sit in a working session with a data engineering team, understand how they model and query their warehouse, then turn that into messaging a data architect and a CFO both act on. I did the equivalent at Sensata: built SQL and GA4 KPI frameworks on 50K+ connected industrial devices, then wrote the positioning that turned that engineering data into a story distributors and OEM engineers acted on, closing the year at $2M+ in first-year revenue.

My read on technical product marketing is that most of it breaks at the handoff between research and writing: someone studies the workflow, then someone else writes the copy without ever sitting in the room. I ran 30+ interviews with OEM and distributor engineers before I wrote a word of positioning, and I built the sales enablement, battlecards, case studies, objection handling, 50+ reps carried into technical evaluations, which is why win rates moved 30%. That is the same loop your Technical Audience Research and Sales & GTM Enablement sections describe, and it is how I would approach WisdomAI's messaging hierarchy and competitive "Why Wisdom vs. X" narratives.

I am not marketing agentic AI from the outside. As Strategic Marketing III at Applied Materials I automate recurring market and pricing analysis with agents built on Claude, and before that I built an LLM-based product myself end to end: SwipeHire, an OpenAI API job-matching tool I scoped, coded in Python and React, and got in front of 50+ early users, running the competitive teardowns and A/B tests that lifted activation 25%. Knowing what it costs to build and evaluate an agent-based system for accuracy is the difference between a category narrative that sounds right and one that holds up when a data team pressure-tests it.

I would bring that same discipline, research the workflow, write the narrative, ship the enablement that proves it, to WisdomAI's launches. Proof trail at adhi-product-ai.vercel.app/ref/wisdomai.
