Hiring Team, Thatch

The positioning problem at Thatch is the same one I spent two years solving at Sensata: make a technical, multi-sided product read as one clear story to buyers who do not share a vocabulary. I wrote the positioning and messaging framework that turned a line of sensing products into a value story engineers and procurement teams both understood, and it drove $2M+ in first-year revenue once the field had the launch plan and the enablement to back it up.

That launch sold through OEM engineers on one side and distributor partners on the other, the same partner-led motion your brokers and benefits consultants run, just with hardware instead of health plans. I built the battlecards and ran the competitive intelligence that gave 50+ reps and distributor partners a 30% win-rate lift in contested deals, and the win/loss signal behind it came from 30+ customer interviews I ran myself, not a vendor's summary.

At Applied Materials I now unify market sizing across Sales, Engineering and Accounts into one view the business acts on, and I run the research itself through AI agents built on Claude so more time goes into the story instead of the spreadsheet behind it. That is the same instinct this role needs: turn customer and competitive insight into a positioning call fast enough that a quarterly campaign can actually act on it.

Measuring whether a new segment's messaging is landing in sales conversations, not just in a deck, is the part of this job I would want to own first. I would welcome a conversation about how the Sensata launch motion and the Applied Materials market-sizing work map onto mid-market and enterprise growth at Thatch. Proof trail at adhi-product-ai.vercel.app/ref/thatch.
