Hiring Team, Carta

Your posting asks for someone who can turn call data, customer interviews and win/loss signal into personas the whole GTM team trusts, and that is the muscle I already built at Sensata. I ran 30+ interviews with OEMs and distributors on a new sensing-product launch, turned what they said into findings Engineering acted on directly, and paired it with competitor and customer analysis across EMEA and the US to find where our story held up and where it did not. That raised CSAT 22% on the product side and fed the positioning work that followed.

The full-funnel half of the role, carrying a value proposition from the brief through the campaign to the sales call, is the GTM work from that same launch. I translated technical specs into buyer-ready messaging, lifting conversion 15% on priority releases, then built the objection handling, case studies and talk tracks 50+ reps used to sell it, which moved win rates 30%. I also led the price-realignment calls behind a separate +12% YoY revenue swing, built on competitive benchmarking across 10+ rival players, so the message and the price moved together instead of apart.

The line in your posting that stopped me was "not just using AI tools, but building with them." I am Strategic Marketing III at Applied Materials right now, and the AI part of that job is not prompting Claude for a summary, it is shipping the agents that run our repetitive market and competitive analysis on their own, so the strategic read gets more of my time instead of less. I am also founder and CEO of PriceKeel, where I built a guardrail engine that learns from a company's own closed-won and closed-lost deals, the same instinct a persona and messaging system needs: read the real pattern, then build the system that keeps it current instead of writing it up once.

Carta is scaling PE and VC buyer intelligence across segments that move fast enough that last quarter's battlecard is already stale. I would rather build the system that keeps catching up with that than hand over a one-time deck. Proof trail at adhi-product-ai.vercel.app/ref/carta if you want the launch, enablement and pricing work firsthand.
