Hiring Team, Parallel Web Systems

Your posting says every non-standard quote, discount request and custom term at Parallel runs through one person who decides when to hold firm and when to bend. I already built the system that makes that call explainable: PriceKeel's guardrail engine reads a live discount exception and recommends an approval limit learned from a company's own closed-won and closed-lost deals, with an audit trail Finance can review on every call.

Before I built that tool I lived the other side of the desk. At Sensata I recovered $700K+ in margin in two quarters leading the Bleeders and Leakers program, negotiating non-standard terms against competitive gaps and customer willingness to pay, and raised distributor margins from 53% to 61% in under two quarters by repricing parts sold through distribution. I also closed AP26 revenue models and multimillion-dollar customer quotes directly with senior executives, the same deal-economics-under-pressure work this seat runs every quarter end.

Running PriceKeel means I set up and run my own CRM, CPQ, forecast reviews and deal approvals end to end instead of inheriting someone else's stack, and I would rather automate an approval than babysit it, which is the entire reason the guardrail engine exists. At Applied Materials I automate my own recurring pricing analysis with AI agents built on Claude instead of rebuilding the same report every cycle, and I carry P&L and revenue targets there the same way a deal desk owner carries deal velocity and terms discipline.

What I would bring to Parallel is someone who has already built deal-desk tooling from scratch and closed a quantified margin gap inside a multi-$100M business, not someone learning the approval matrix on the job. Proof trail at adhi-pricing-ai.vercel.app/ref/parallel-web-systems.
