PITCH DECK | PARALLEL WEB SYSTEMS DEAL DESK MANAGER

Every non-standard quote at Parallel needs one person who can model a deal's economics in minutes and make the call. I have already built that exact system, twice.

Deal-desk tooling, margin recovery and quote-level deal economics from someone who builds this exact product on the side.

- **$700K+** margin recovered in 2 quarters, Sensata Bleeders and Leakers program
- **53% to 61%** distributor margin lift via repricing logic that stuck
- **PriceKeel** - founder of a discount-guardrail engine and Finance audit trail
- **AP26 revenue models** and multimillion-dollar customer quotes closed with senior executives
- **AI agents built on Claude** automating recurring deal and margin review

WHY THIS DECK EXISTS

The problem is not that Parallel lacks a pricing policy. It is that usage-based AI products throw off a non-standard quote on nearly every enterprise deal, and someone has to decide fast, defensibly, and in a way Legal and Accounting can both book.

What building a deal desk from zero actually requires

Approval matrices and quoting workflows that keep up with AEs selling consumption and committed-spend pricing, not a policy document nobody opens before a live call.

A model of each deal's economics, ramp timing, prepaid commitments, multi-year terms, that an AE can get an answer from in minutes, not after quarter-end pressure has already set in.

A system Legal and Accounting trust enough to let revenue recognition and billing run cleanly, so deal velocity never becomes a billing problem later.

What I have already run

At **PriceKeel**, I built the discount-guardrail engine and Finance audit trail from zero, the exact approval-matrix-plus-audit-trail this seat stands up for Parallel.

At **Sensata**, I recovered $700K+ in margin in 2 quarters negotiating non-standard terms deal by deal, and closed AP26 revenue models and multimillion-dollar customer quotes directly with senior executives.

I run my own **CRM, CPQ, forecast and pipeline reviews** at PriceKeel instead of inheriting someone else's stack, the same build-from-zero mandate this role carries.

The through-line: every deal-desk system I have touched started with "this non-standard request needs a fast, defensible call" and ended with a rule Legal, Finance and Sales could all act on.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Every non-standard quote, discount request, and custom term runs through you... stand up approval matrices, quoting workflows."*

> *"Decide when to hold firm and when to bend, inside the pricing and margin guardrails set with GTM strategic finance."*

> *"Partner with legal on contract terms and with accounting so every deal books cleanly and bills correctly."*

My proof

Approval matrices and quoting workflows: built PriceKeel's guardrail engine and quoting-approval logic from zero, selling that exact tooling against legacy CPQ and deal-desk systems.

Hold firm or bend inside margin guardrails: recovered $700K+ in margin in 2 quarters at Sensata by deciding, deal by deal, where to hold and where to bend against competitive gaps and customer willingness to pay.

Books cleanly, bills correctly: designed PriceKeel's audit trail so Finance and accounting have evidence for every pricing call before it is booked.

Deal velocity under pressure: closed AP26 revenue models and multimillion-dollar customer quotes with senior executives, the same quarter-end deal cadence this seat runs.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the margin leak, close it, make it hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by product line, so leadership could prioritize instead of chasing anecdotes.

$433M

Margin Shortfall Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay, the same triage a guardrail engine needs to decide which deals escalate.

$700K+

Margin Recovered in 2 Quarters

Closed through deal-by-deal negotiation on non-standard terms, not an across-the-board policy change.

53% to 61%

Distributor Margin Lift

Repriced the channel logic itself, so the gain held past the first quarter instead of drifting back under renewal pressure.

The same BU also ran AP26 revenue models and multimillion-dollar customer quotes alongside senior executives on its highest-value accounts. The common thread: every fix was deal-specific, and every fix was measured after it shipped, not left as a policy memo.

FIRST 30 DAYS

What the first month building Parallel's deal desk from zero looks like.

WEEK 1

Map every non-standard request from last quarter

Pull every discount exception and custom term AEs requested last quarter, sit with Sales, Legal and Accounting to find exactly where today's process breaks down before writing a single rule.

Why first: the same move that started the Bleeders and Leakers program at Sensata, find the leak before naming the fix.

WEEK 2-3

Ship the first approval matrix and guardrail

Build the first approval matrix and discount guardrail for the highest-volume deal type, ramp or committed-spend, pressure-test it live with an AE under quarter-end pressure, and ship it as a rule Legal and Accounting can both act on.

Why now: the same deal-by-deal modeling discipline that made the 53% to 61% distributor gain stick instead of drift back.

WEEK 4

Automate the approval, do not babysit it

Turn the first rule into something the CPQ and quoting system enforces on its own, and route only genuine exceptions to a human call, so deal velocity does not wait on a person reading every quote.

Why this fast: the same AI-agent habit that keeps my own recurring reporting moving at Applied Materials today, not a plan for someday.

CLOSE

You are hiring someone to build Parallel's deal desk from zero and own deal velocity, terms discipline and margin guardrails. I have already built that system twice, with a number on it each time.

The margin half: **$700K+ recovered in 2 quarters** and distributor margins lifted **from 53% to 61%** at Sensata, closed through deal-by-deal negotiation rather than a policy memo, plus AP26 revenue models and multimillion-dollar customer quotes closed with senior executives.

The build half: **PriceKeel's guardrail engine and audit trail**, built from zero so Finance and accounting can book against every call, running my own CRM, CPQ and deal approvals end to end. At Applied Materials I automate my own recurring pricing analysis with AI agents built on Claude instead of rebuilding the same report every cycle.
