Hiring Team, Ramp

Your posting asks one PM to own price benchmarking, contract intelligence and a two-sided marketplace connecting buyers and vendors, which is a wider mandate than most product roles carry, and it is the exact shape of work I already run: turning raw deal and pricing data into a product surface someone can act on in the moment, not a report they read later.

At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities benchmarked against a $627M target across 3 regions and 20 product lines, surfacing $433M in margin gaps for sales leaders to act on by account and product line. That work recovered $700K plus in margin in two quarters and, paired with competitive benchmarking across 10+ players, drove a price realignment that lifted revenue 12% year over year. Benchmarking data against a market and turning that spread into a decision a seller can use at the point of a deal is the same job your vendor intelligence surface is asking for.

The marketplace half is not new either. I built SwipeHire zero-to-one, an AI matching engine on Python and the OpenAI API that extracts and normalizes signal from resumes and job postings on one side and employer requirements on the other, then generates auto-tailored matches for both. I wrote the PRD, scoped the MVP, and ran 8+ A/B tests and 12+ user interviews against it, lifting activation 25% and onboarding 50+ early users. Defining what counts as a good match, then validating the extraction pipeline against real behavior instead of a demo, is the groundwork your evaluation and quality standards for AI-based contract analysis will need.

I also carry the product fundamentals this role runs on day to day: I owned the sensor product roadmap and a 100+ feature backlog at Sensata, grounding every call in 30+ customer interviews and SQL/GA4 cohort data rather than opinion, and I run AI agents built on Claude today at Applied Materials to cut the time spent on repetitive analysis. I would like to bring that same pairing of pricing rigor and shipped product to Ramp's vendor intelligence and marketplace roadmap. Proof trail at adhi-product-ai.vercel.app/ref/ramp.
