Hiring Team, Glean

At Plug Power I rebuilt the WordPress-to-Pardot lead flow end to end, cutting cost per lead 50%, then automated the surrounding Mar-Tech stack (Salesforce, Adobe Analytics, GA, Google Tag Manager) so campaign reporting closed the loop without a manual pull. Your posting asks for the same discipline at a bigger scale: content syndication, paid newsletters, email nurtures, direct mail and ABM all feeding one pipeline the sales team can actually work.

The sales side is not new either. At Sensata I designed and executed multi-channel demand-gen campaigns for new sensing product launches across North America and Europe, generating +35% qualified leads and net new pipeline, then built the sales enablement decks and case studies that helped 50+ reps close them, lifting win rates 30%. A demand-gen program only pays off once the BDRs working the leads trust where they came from, and I built that trust by staying in the room with sales instead of handing off a lead list and moving on.

I carry the analytics side just as far. At Pixis I owned P&L for an 8-client, \$15K to \$90K-per-client-per-month portfolio and used Amplitude and Tableau to cut client churn 50% and lift campaign ROAS 40%, the same cost-effectiveness and conversion discipline your posting wants applied across a webinar and content calendar. At Applied Materials I now automate the repetitive side of my own forecasting with AI agents built on Claude, freeing the time that a demand-gen calendar of campaigns, budgets and timelines actually needs.

Glean's product puts a technical buyer and a business buyer in front of the same tool, which is exactly the kind of pipeline I want to build next: content and nurtures for the broad net, webinars and account-based plays for the accounts big enough to earn a demo. Proof trail at adhi-growth-ai.vercel.app/ref/glean.
