

PITCH DECK | SIERRA BUSINESS VALUE STRATEGY AND OPERATIONS

Every enterprise buyer needs their own investment case. I have already built that case, closed the gap it pointed to, and I am building the tool that makes the next one repeatable.

ROI modeling, margin recovery and a business value framework built from scratch, from someone who also builds pricing tools on the side.

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

53% to 61% distributor margin lift via repricing logic that held

1,200 pricing opportunities ranked against a \$627M target, 3 regions

PriceKeel - founder of a business value framework for B2B deal pricing

+12% YoY revenue, +8% share via price realignment vs. 10+ competitors

The problem is not that Sierra lacks proof of value. It is that **every enterprise buyer needs their own investment case.**

What a business at this stage runs into

Selling customer-facing AI agents into brands like The GAP, Rocket Mortgage, SoFi, Sutter Health and SoftBank means every deal has its own operating metrics, its own definition of a win, and its own finance team that has to sign off before the deal closes.

A generic ROI deck does not survive that room. The business case has to be rebuilt, fast, around each customer's own cost structure, revenue lines and loyalty metrics, and it has to hold up when a CFO pushes back.

The fix is not one great case study. It is a repeatable methodology: a framework that turns a new customer's numbers into a rigorous case without starting from a blank page every cycle.

What I have already run, at smaller scale

At **Sensata**, I ran the Bleeders and Leakers program: a Power BI system that ranked pricing opportunities against a hard revenue target, by region and product line, so leadership knew exactly where the case for action was strongest.

I did not stop at the model. I **closed the gap it pointed to**, which is why the 53 percent to 61 percent margin gain held past the first quarter instead of drifting back.

I am now building **PriceKeel**, a business value framework for B2B deal pricing built from the ground up, because the same problem, an unowned methodology for proving value, keeps showing up in every fast-growing company I have worked with.

A business value strategist who develops customer-specific value frameworks, builds ROI models grounded in operating and financial metrics, and establishes that methodology from the ground up is describing this exact loop: rank the opportunity, prove the number, make the proof repeatable for the next enterprise cycle.

What the Business Value Strategy and Operations opening asks for, and where the proof sits.

What the role covers

- "Build rigorous ROI models and investment cases grounded in operating and financial metrics."*
- "Establish Sierra's business value framework from the ground up, while staying hands-on in the modeling."*
- Pricing team, San Francisco, partnering with sales through complex enterprise sales cycles.*

My Proof

- Bleeders and Leakers program at Sensata:** built the dashboard, surfaced \$433M in margin gaps, then closed \$700K+ of it in 2 quarters through negotiated fixes grounded in competitive and financial data.
- Enterprise stakeholder exposure:** the AP26 revenue models and multimillion-dollar customer quotes ran alongside senior executives, the same finance-and-operations audience a business value case has to convince.
- PriceKeel today:** building a business value framework and audit trail from scratch, the exact ground-up methodology work this role is built around.
- Applied Materials now:** partner with Sales, Engineering and Accounts to turn field input into one investment view across multiple semiconductor product groups.

Bleeders and Leakers: rank the case, close the case, make it hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

The same BU also ran a price-increase model flagging line items where a change could lift profitability more than 50 percent, and multimillion-dollar customer quotes built alongside senior executives. The common thread: every case was grounded in operating and financial metrics, and every case was measured after it shipped.

What the first month building Sierra's business value framework looks like.

WEEK 1 Map the existing cases Pull the ROI stories and investment cases already used in live enterprise cycles. Sit with the pricing team, sales and a handful of recent customers to hear which operating metrics actually moved a CFO, and which ones fell flat. Why first: the strongest case pattern is usually visible in what already closed. Same move that started the Bleeders and Leakers program.	WEEK 2-3 Build the repeatable model Turn the strongest patterns into a rigorous ROI model template grounded in cost, revenue and loyalty metrics, then pressure-test it against 2 to 3 live deals with sales before it goes wide. Why now: building the model with real deals in the room, not in a vacuum, is what made the 53% to 61% distributor gain stick.	WEEK 4 Scale it by industry Package the template into industry-specific business cases sales can adapt quickly, plus the audit trail that shows finance and operations stakeholders exactly how each number was built. Why this fast: a framework only earns its name once a second team can run it without you in the room.
---	--	---

CLOSE

You are hiring someone to build the business value framework, not just run one case. I have already closed a quantified gap at scale, and I am building the tool for the next one.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and **+12% YoY revenue with +8% market share** from price realignment against 10+ competitors, all grounded in operating and financial metrics and tested with senior executives before it shipped.

What is harder to find is someone who has also spent the last several months building the business value product a growing pricing organization like Sierra's would eventually want internally. **I am building that at PriceKeel right now**, which means the ground-up methodology work is not something I would need to learn on the job.
