Hiring Team, Poshmark

Your posting opens with new user onboarding and early activation, and that is the exact funnel I have already owned end to end on my own product. Building SwipeHire from PRD to launch, I instrumented the GA4/GTM event tracking behind its onboarding flow, then ran 8+ A/B tests and 12+ user interviews against it, lifting activation 25% before I had a team to lean on. Auditing the funnel, defining the metrics, then running the experimentation engine myself is exactly what your first six months are asking for.

The experimentation muscle is not new either. At Plug Power I ran 15+ A/B tests across paid search and social, turning bid-optimization experiments into a 25% cut in CPA, then layered in customer research that reshaped targeting and onboarding messaging for a 20% lift in conversion. Running a high-velocity test program and reading the result correctly, not just shipping the variant, is the same rigor a marketplace onboarding and retention surface needs.

Reading behavior, not just clicks, is where I spend the rest of my time. At Sensata I built cohort-level KPI dashboards across 50K+ connected devices to isolate the drop-off signals behind an 18% adoption lift, then ran 30+ structured interviews to understand why users stalled. At Pixis I used Amplitude to read behavior across 30+ campaigns for an 8-client, D2C-heavy portfolio, isolating drop-off and re-engagement moments that lifted ROAS 40% and cut churn 50%, the same behavioral instinct a first-touch marketplace funnel runs on.

At Applied Materials today I automate my own recurring analysis with AI agents built on Claude rather than rebuild the same report every cycle, freeing up the kind of hours an experimentation cadence like this one runs on. I would like to bring that cadence to Poshmark's onboarding funnel. Proof trail at adhi-growth-ai.vercel.app/ref/poshmark.
