

PITCH DECK | FAIRE STRATEGY & OPERATIONS SENIOR ASSOCIATE

Advertising is one of Faire's fastest-growing revenue lines, which means the GTM strategy behind it is still being written. I have already written that kind of strategy from scratch, with the dashboard and the number attached.

A \$627M-target pricing strategy dashboard built from zero, and the competitive case behind an 8-point share gain.

\$433M surfaced from a strategy dashboard built from scratch

+8% market share from a 10+ competitor benchmarking case

5-consultant team led on a TAM/SAM/SOM market-entry study

Cross-functional by design: Sales, Engineering and Accounts in one view

AI agents built on Claude automating my own recurring analysis

The job is not "run the numbers." It is building the **strategic case from an ambiguous question**, then owning it in front of leadership.

What that actually requires

A metric and a model that did not exist yesterday, built from first principles, not a template pulled off a shelf.

Cross-functional pull from Product, Sales, Systems and Marketing, because an advertising growth lever touches all four.

A recommendation presented to leadership with enough rigor that it survives the first hard question.

What I have already run

At **Sensata**, I built the FY2026 Bleeders and Leakers dashboard from scratch, no existing tool answered the question, ranking 1,200 opportunities against a \$627M target.

At **Applied Materials**, I partner directly with Sales, Engineering and Accounts to turn scattered field input into one strategic view.

I led a **5-consultant team** through a TAM/SAM/SOM study for Safran, presenting the market-entry recommendation directly to their leadership.

The through-line: every strategy case I have built started from an ambiguous question with no existing model, not a dashboard someone else had already designed.

What the posting asks for, and where the proof already sits.

What the role covers

- "Break down complex and ambiguous strategic problems to uncover actionable insights."*
- "Lead large cross-functional strategic initiatives that move company metrics in partnership with Product, Sales, Systems, Program Management, Marketing."*
- "Regularly present performance, new insights, and recommendations to Faire's go-to-market teams and leadership."*

My proof

- Sensata, built from scratch:** designed the FY2026 pricing dashboard end to end, surfacing \$433M in margin gaps for leadership to prioritize.
- Sensata, cross-functional strategy:** benchmarked 10+ competitors into a strategic recommendation that drove +8% market share and +12% YoY revenue.
- Applied Materials, cross-functional by design:** partners with Sales, Engineering and Accounts on every sizing model, the exact function list this role names.
- Executive presentation:** modeled site transition strategy and revenue scenarios directly with senior executives at Sensata.

Find the metric, build the model, then **defend the recommendation in the room that matters.**

The same three-step pattern, run twice at Sensata and once for Safran: define what to measure, build the analytical model that quantifies it, then present the recommendation to the people who decide.

\$433M Surfaced

Dashboard Built From Scratch

1,200 pricing opportunities ranked against a \$627M target across 3 regions and 20 product lines, no existing tool to build from.

+8% Share

Competitive Benchmarking Case

10+ competitors benchmarked into a strategic recommendation that also drove +12% YoY revenue.

170 to SAM 28

Market-Entry Study, Safran

Led a 5-consultant team through TAM/SAM/SOM analysis across 150+ facilities and 10+ competitors.

None of these were a slide deck that sat in a folder. Each one closed the loop from an ambiguous question to a recommendation leadership acted on.

What the first month on Faire's Strategy & Operations team looks like.

WEEK 1 Map the advertising GTM metric set Pull the existing performance data on Faire's advertising line, find where the growth-lever hypothesis is already supported and where it is still assumed. ----- Why first: the same first move behind the Sensata dashboard, size what is known before building what is missing.	WEEK 2-3 Build the model for one growth hypothesis Pick the highest-ambiguity question, which brand segment or placement moves the advertising number most, and build the quantitative case with Product, Sales and Marketing. ----- Why now: the same cross-functional build that produced the Bleeders and Leakers case, not a solo analysis.	WEEK 4 Present the recommendation to leadership Apply the executive-presentation discipline from the Sensata and Safran work to Faire's GTM teams, with a documented process so the next cycle builds on it instead of restarting. ----- Why this fast: the same operating cadence (OKRs, weekly and quarterly reviews) I run today at Applied Materials.
---	---	---

CLOSE

You are hiring someone to turn an ambiguous growth question into a recommendation leadership acts on. I have already built that case from scratch, twice, and put a number on each one.

The strategy half: a **\$627M-target dashboard built from scratch**, surfacing \$433M in margin gaps, and a **10+ competitor benchmarking case** that drove +8% market share at Sensata.

The cross-functional half: partnering with Sales, Engineering and Accounts on every model at Applied Materials today, and leading a 5-consultant team through a market-entry study presented directly to Safran's leadership.
