Hiring Team, LinkedIn

Your posting asks for someone who can turn a hypothesis about willingness-to-pay into a pricing and packaging model a VP of Product can approve. I already run that loop: at Sensata I built the willingness-to-pay and competitive-gap case behind a distributor repricing program, raising channel margins from 53% to 61% in under two quarters, then used the same analysis to recover over \$700K in margin. The inputs change from distributor tiers to member subscription tiers, but the discipline, read the data, build the model, defend it to executives, is the same one your monetization strategy team runs.

I also build the analytical infrastructure that work depends on. I designed and ran the FY2026 Bleeders and Leakers dashboard at Sensata, ranking 1,200 pricing opportunities against a \$627M target across 3 regions and 20 product lines, surfacing \$433M in margin gaps for leadership to prioritize. As founder of PriceKeel I now build a discount-guardrail engine that learns pricing rules from a company's own closed-won and closed-lost deals, which is the packaging-governance problem your posting describes as developing global processes for price execution and monitoring. I automate the repetitive side of that analysis with Claude AI agents in my current role at Applied Materials, freeing time for the judgment calls a subscription pricing model actually needs.

I like that this role sits at the point where Premium's new AI-based features force a real pricing decision rather than a maintained one. That is closer to the work I want: building the case for a packaging change before the product team has fully committed to it, not optimizing a tier structure that was set years ago.

I would like to bring that pricing discipline to LinkedIn's Monetization Strategy team. Proof trail at adhithyabhaskar.vercel.app/ref/linkedin.
