

PITCH DECK | LINKEDIN MONETIZATION STRATEGY MANAGER

**Your Premium subscription tiers are about to face a willingness-to-pay question they have not faced before: what members pay for new AI features. I have already run that exact model, on a different product, with the executive write-up attached.**

*A distributor repricing program built on willingness-to-pay and a \$627M pricing dashboard, both presented to senior executives.*

**\$700K+ margin recovered** in 2 quarters via willingness-to-pay analysis

**53% to 61%** channel margin lift from a packaging repricing program

**\$627M target, \$433M surfaced** in a pricing opportunity dashboard

**PriceKeel**, a discount-governance engine in pilots

**AI agents built on Claude** automating my own pricing analysis

## The job is not "set a price." It is building the **hypothesis-driven case** a VP signs off on before the price ever changes.

### What that actually requires

A willingness-to-pay read that holds up when Product, Finance and Marketing all challenge it from a different angle.

An analytical model built from scratch, not a template, because the member segments and the AI-feature bundles are new.

A process foundation for price governance that survives the next three pricing decisions, not just this one.

### What I have already run

At **Sensata**, I built the willingness-to-pay and competitive-gap case behind a distributor repricing program, defended it to executives, and used it to recover \$700K+ in margin.

I designed the **Bleeders and Leakers dashboard** from scratch: 1,200 opportunities, 3 regions, 20 product lines, built because no existing tool answered the question.

At **PriceKeel** today, I build the governance layer, a discount-guardrail engine Finance can audit, that a pricing decision needs to repeat cleanly.

The through-line: every pricing change I have shipped had the willingness-to-pay case and the governance process built before the price moved, not justified after.

# What the posting asks for, and where the proof already sits.

## What the role covers

*"Leverage hypothesis-driven analyses to evaluate subscription pricing, packaging and member value opportunities."*

*"Build analytical models to inform, size and influence pricing strategy."*

*"Develop process foundations to improve price governance, monitoring of price performance, execution, market validation."*

## My proof

**Sensata, willingness-to-pay case:** built the competitive-gap and customer willingness-to-pay analysis behind the Bleeders and Leakers program, recovering \$700K+ in margin in 2 quarters.

**Sensata, analytical model from scratch:** designed the FY2026 Power BI dashboard ranking 1,200 opportunities against a \$627M target, surfacing \$433M in margin gaps for leadership.

**PriceKeel, price governance:** built an explainable discount-guardrail engine and the audit trail Finance reviews for every pricing decision.

**Executive business case:** modeled AP26 revenue scenarios and multimillion-dollar customer quotes directly with senior executives at Sensata.

Build the model, defend it to executives, then ship the governance that keeps the next decision honest.

The same three-step pattern, applied to a distributor channel instead of a member subscription tier: size the willingness-to-pay gap, build the model that quantifies it, then put a governance process under the decision so it is not re-litigated every quarter.

**\$700K+**

**Margin Recovered in 2 Quarters**

From a willingness-to-pay and competitive-gap case built for the Bleeders and Leakers negotiation program at Sensata.

**53% to 61%**

**Channel Margin, Repricing Program**

Distributor and channel-partner margins raised in under 2 quarters by rebuilding the packaging and price structure.

**\$433M Surfaced**

**Pricing Dashboard, \$627M Target**

1,200 opportunities across 3 regions and 20 product lines, designed and built from scratch, not a template.

None of this was a pricing recommendation that sat in a deck. Each case closed the loop from hypothesis to a number Finance and Sales leadership signed off on.

# What the first month on LinkedIn's Monetization Strategy team looks like.

WEEK 1

**Map the current Premium pricing hypothesis set**

Pull existing willingness-to-pay data on Premium tiers and the new AI-based features, find where the member-value story is strongest and where it is still assumed rather than tested.

---

**Why first:** the same first move behind the Sensata dashboard, find where the existing evidence is thin before building a new model.

WEEK 2-3

**Build the analytical model for one packaging question**

Pick the highest-ambiguity packaging decision, a Creator or Entrepreneur tier, or an AI-feature bundle, and build the quantitative case with Product, Product Marketing and Strategic Finance.

---

**Why now:** the same cross-functional build that produced the Bleeders and Leakers case, not a solo analysis.

WEEK 4

**Stand up a lightweight price-governance checkpoint**

Apply the audit-trail discipline from PriceKeel to one pricing workflow: a documented decision record Commerce and Engineering can implement against without relitigating the model each time.

---

**Why this fast:** the same governance habit I run for PriceKeel's own pricing decisions today.

CLOSE

**You are hiring someone to build the hypothesis-driven case behind LinkedIn's next pricing and packaging decision. I have already built that case, defended it to executives, and put a number on it twice.**

The willingness-to-pay half: **\$700K+ in margin recovered** and channel margins raised **53% to 61%** from a repricing program built on competitive-gap and willingness-to-pay analysis at Sensata.

The governance half: a **\$627M-target pricing dashboard** built from scratch, and an explainable discount-guardrail engine I now build at PriceKeel, the same audit-trail discipline a process foundation for price governance needs.
