Hiring Team, Intuitive

Your posting asks for someone who can open a price discrepancy between a quote, an order and an invoice and fix the system condition causing it, not just patch the one line item. That is the exact habit I built at Sensata leading the Bleeders and Leakers program: tracing discrepancies on live deals back to their root cause, which recovered $700K plus in margin in two quarters and lifted distributor margins from 53% to 61% in the same stretch.

I have since built the CPQ side of that work from scratch. PriceKeel, the company I founded, is the system I set up and run myself: CPQ pricing rules and approval workflows that activate contracted and tiered deal terms, and a guardrail engine that reads a live discount exception and recommends a fix learned from a company's own closed-won and closed-lost deals. I also built the audit trail Finance reviews behind every one of those decisions, the audit-ready control your posting asks this role to maintain.

The reporting side is familiar ground too. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions and 20 product lines, and a separate price-increase model flagging line items where a change could lift profitability more than 50%. Both ran on the same advanced Excel and Tableau skills your posting lists, and both were built to survive a regression test, not just a one-time review.

At Applied Materials I automate the repetitive side of pricing analysis with Claude AI agents, the generative AI for process automation your preferred qualifications name directly, which frees time for the quote-to-cash process design and sales training your posting also asks for. Proof trail at adhi-pricing-ai.vercel.app/ref/intuitive.
