PITCH DECK | INTUITIVE PRICING OPERATIONS SPECIALIST

# A price-discrepancy seat that owns CPQ configuration, contracted pricing and audit-ready controls needs someone who has already run all three in one build.

*Quote-to-invoice discrepancy resolution, CPQ pricing rules and approval workflows, and the audit trail that keeps pricing accuracy reporting clean.*

- **$700K+** in margin recovered in 2 quarters by fixing root-cause price discrepancies
- **53% to 61%** distributor margin lift through contracted-pricing repricing
- **Builds and runs** its own CRM/CPQ configuration and approval workflows as a founder
- **$627M** pipeline, 1,200 opportunities, $433M in margin gaps surfaced for leadership
- **Claude AI agents** automating recurring pricing analysis

WHY THIS DECK EXISTS

# A pricing operations seat does not lack candidates who know CPQ in theory. It lacks someone who has already traced a price discrepancy to its system cause, fixed the system and documented the fix for an audit, as one job.

### What this seat runs into

A price discrepancy between a quote, an order and an invoice only stays fixed if someone finds the system condition causing it, not just overrides the one line item.

A CPQ instance only keeps contracted and tiered customer terms accurate if its pricing rules and approval workflows get configured and regression-tested after every change, not left as a one-time setup.

Pricing accuracy and quoting-cycle-time reporting only means something to an auditor if the record behind every override is explainable, not reconstructed after the fact.

### What I have already run, at comparable scale

At **Sensata**, I traced price discrepancies on live deals back to their root cause, recovering $700K+ in margin in 2 quarters through the Bleeders and Leakers program.

As founder of **PriceKeel**, I configure and run the CPQ pricing rules and approval workflows that activate contracted and tiered deal terms before a quote ships.

At PriceKeel, I built the **audit trail** that gives Finance an explainable record behind every pricing decision, the audit-ready control this role is asked to maintain.

**This req asks for price-book support, contracted and tiered customer pricing in CPQ and ERP, discrepancy investigation across quote/order/invoice, CPQ rule configuration with regression testing, and audit-ready controls. That is the loop above, already run end to end.**

THE REQ, MAPPED

# What the Pricing Operations Specialist opening asks for, and where the proof sits.

## What the role covers

Support global price books: new product introductions, list price changes, regional variants, effective dating.

Activate and maintain contracted, deviated and tiered customer pricing in CPQ and ERP.

Investigate price discrepancies across quote, order and invoice, and fix the underlying system condition.

Configure and maintain CPQ pricing rules and approval workflows, and regression-test after changes.

Design and improve quote-to-cash processes, train sales and pricing teams, and maintain audit-ready controls.

## My Proof

**Bleeders and Leakers at Sensata:** traced price discrepancies on live deals to their root system cause, recovering $700K+ in margin in 2 quarters.

**53% to 61% distributor margins:** a repricing program against contracted, channel-level pricing, run end to end and documented for governance review.

**PriceKeel CPQ ownership:** set up and run the pricing rules and approval workflows that activate contracted and tiered deal terms.

**PriceKeel audit trail and Sensata Power BI dashboards:** the audit-ready controls and pricing-accuracy reporting a quote-to-cash process depends on.

THE SENSATA PROOF, IN DEPTH

# Bleeders and Leakers: a cross-product discrepancy-and-margin program against a $627M book.

Built as a Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line, the pricing-accuracy reporting this role maintains.

**$433M**

**Margin Gaps Surfaced**

Ranked every pricing discrepancy into one cross-product view instead of chasing line items one at a time.

**$700K+**

**Margin Recovered in 2 Quarters**

Closed by tracing each discrepancy back to the system condition causing it, then fixing that condition.

**53% to 61%**

**Distributor Margin Lift**

A contracted-pricing repricing program run through distribution, then documented for audit review.

The same seat shaped multimillion-dollar customer quotes and AP26 revenue models with senior executives and Finance. The common thread: every case started from a deal's own history and ended in a pricing fix that held up under audit.

FIRST 30 DAYS

# What the first month owning Intuitive's CPQ instance and price books looks like.

WEEK 1

### Learn the CPQ instance and the discrepancy backlog

Sit with Sales and Pricing to map how a quote moves through CPQ and ERP today, and pull the open quote-order-invoice discrepancies, the same first move behind the Bleeders and Leakers program at Sensata.

**Why first:** a discrepancy fix is only as good as the system map it is checked against.

WEEK 2-3

### Fix the first root-cause discrepancy and regression-test the rule change

Trace the highest-volume discrepancy pattern to its system cause, correct the CPQ pricing rule or approval workflow behind it, and regression-test the change before it reaches a live quote.

**Why now:** the same root-cause-first habit that made the $700K recovery at Sensata hold.

WEEK 4

### Ship the first pricing-accuracy and quoting-cycle-time report

Roll up discrepancy rate, resolution time and quoting cycle time into one audit-ready view, and present it to Sales, Pricing and Finance.

**Why this fast:** the same habit that keeps Claude agents running recurring pricing analysis at Applied Materials today.

CLOSE

# You are hiring someone to own CPQ configuration, price discrepancies and audit-ready controls together. I have already built and run that combination myself.

The core proof is Sensata: **$700K+ recovered in 2 quarters** and a **53% to 61% distributor margin lift**, both closed by tracing price discrepancies to their root cause across a $627M-opportunity Power BI pipeline.

What is harder to find is someone who also owns the system side: as founder of **PriceKeel**, I configure and run my own company's CPQ pricing rules, approval workflows and audit trail end to end, and at **Applied Materials** I automate recurring pricing analysis with Claude AI agents, the same operating habit a pricing-operations seat needs for its price books and audit controls.
