Hiring Team, Amazon Web Services (AWS)

An observability buyer does not want a dashboard, they want to trust the signal on it before the pager goes off. The closest I have come to building that trust is on the device side rather than the cloud side: at Sensata, I built the KPI frameworks myself, in SQL and GA4, across 50,000-plus connected industrial devices, turning raw telemetry into the adoption signals that told us which cohorts to chase, which lifted feature adoption 18%. It's the same underlying problem AWS Observability solves for its customers, just with servers and services standing in for sensors.

Direct evidence of fit:

- Built KPI frameworks in SQL and GA4 across 50,000+ connected industrial devices, turning device-level telemetry into adoption signals that lifted feature adoption 18%.
- Owned end-to-end GTM for a new Sensata product line across North America and Europe, positioning, pricing, channel and launch together, driving \$2M+ first-year revenue and +35% qualified leads.
- Ran 30+ structured discovery interviews with OEM and distributor buyers, feeding insights that raised CSAT 22% and shaped the launch roadmap.
- Armed 50+ reps with sales enablement (decks, case studies, battlecards), lifting win rates 30% against entrenched incumbents.

What I bring is not a monitoring resume, it is practice turning a system's raw output into a story an engineer trusts enough to act on, then packaging that story for the people who sign the check. I run that same translation today as Strategic Marketing III at Applied Materials, building value-based pricing for a fast-moving semiconductor market and automating the repetitive side of that analysis with Claude AI agents so the positioning work gets sharper, not slower. I read the AWS Observability posting as asking for someone who can make a technical, telemetry-heavy product legible to a buyer who has been burned by noisy dashboards before. That is exactly the muscle I have been building.

Proof trail at adhi-product-ai.vercel.app/ref/aws if you want to see the GTM and enablement work firsthand.
