

PITCH DECK | HEALTHEDGE PRODUCT MARKETING MANAGER

HealthEdge Source is scaling into a growing book of health plans. The battlecards, personas and enablement library that keep sales current with that growth are work I already build, not work I would be learning on the job.

A positioning-to-enablement track record built on 30+ customer interviews and a 50+-rep enablement library, paired with the regulated-buyer instinct this market shares with clean energy and aerospace compliance.

Sensata battlecards/personas - competitive intel synthesized for 50+ reps, win rates +30%

30+ interviews - became testimonials, case studies and roadmap input, CSAT +22%

\$2M+ launch - owned positioning, pricing, channel and launch end to end

Regulated buyers - clean energy (Plug Power), aerospace/auto compliance (Sensata)

AI agents on Claude - in production use today, Applied Materials

A growing book of health plans does not wait for a battlecard to catch up. **Competitive intelligence that lags the market is a sales problem before it is a marketing one.**

What that actually requires

Battlecards and personas synthesized fast enough that a rep is never walking into a renewal or a competitive deal with stale material.

Customer references and case studies that double as proof for a new logo and as roadmap signal for product, not one or the other.

Launches where positioning, pricing, packaging and demand generation move on the same clock instead of in sequence.

What I have already built at that exact seam

Built **competitive battlecards and buyer personas** at Sensata that 50+ reps pulled up mid-deal, lifting win rates 30% because the material matched the stage a rep was actually in.

Ran **30+ structured customer interviews** with OEMs and distributors, turning the findings into testimonials, case studies and roadmap input that raised CSAT 22%.

Owned a **full product launch end to end** (positioning, pricing, channel, launch) to \$2M+ in first-year revenue, the same moving-parts-together sequence a core-solutions launch needs.

The through-line: I have already run the research-to-battlecard-to-enablement loop this role owns, on a product line where getting a technical claim wrong carried real stakes.

What the HealthEdge posting asks for, and where the proof already sits.

What the role covers

- "Contributes to competitive intelligence findings and insights. Synthesizes information into battle cards designed to inform key stakeholders."*
- "Develops a deep understanding of buyers to inform, create, and maintain target personas that cover buyer needs and the purchasing decision process."*
- "Develops customer references, testimonials, and case studies for external and internal use."*

My proof

- Battlecards that got used:** competitive benchmarking across 10+ players at Sensata, synthesized into the material 50+ reps relied on, win rates +30%.
- Personas built from real interviews, not assumptions:** 30+ structured OEM and distributor conversations, plus a 4-vertical persona build for Safran that included healthcare.
- References and case studies that fed two audiences:** the same 30+ interviews became testimonials for sales and roadmap input for product, raising CSAT 22%.
- A launch that moved every lever together:** positioning, pricing, channel and launch owned end to end to \$2M+ in first-year revenue.

Sensata: a competitive-intelligence loop built on real interviews, not a battlecard written from a press release.

Built as the owner of positioning, battlecards and personas for a new sensing line, not handed a messaging doc to localize after launch.

30+

Structured Customer Interviews

OEM and distributor buyers, the raw signal behind every persona and reference built afterward.

50+ / 30%

Reps Enabled / Win-Rate Lift

A battlecard and case-study library reps actually pulled up, instead of five teams each improvising their own pitch.

\$2M+ / 22%

First-Year Revenue / CSAT Lift

The launch result and the customer-satisfaction lift that followed feeding the interviews back into the roadmap.

The regulated-buyer instinct behind it comes from clean-energy budgets at Plug Power and automotive/aerospace compliance work at Sensata, the closest honest parallel to a health-plan buyer's purchasing process.

What the first month on the HealthEdge Source Product Marketing team would look like.

WEEK 1 Sit with Sales and Product, not the deck library Pull the last quarter of lost competitive deals and talk to the reps who ran them, the same move that grounded every Sensata battlecard in a real conversation instead of a guess. ----- Why first: a battlecard built on assumptions is the fastest way to lose a rep's trust before it ever ships.	WEEK 2-3 Ship the battlecard or persona reps are missing most Build the single asset most likely to move a live competitive deal this quarter, benchmarked the same way the Sensata library was, the one that lifted win rates 30%. ----- Why now: one asset in active use beats a full library nobody has opened yet.	WEEK 4 Turn the first win into the maintenance system Set the cadence that keeps battlecards, personas and case studies current as the competitive landscape moves, so the library never goes stale between launches again. ----- Why this fast: an enablement library only earns its maintenance budget by proving it moved a deal first.
--	--	--

CLOSE

HealthEdge needs competitive intelligence, personas and customer references that keep pace with a growing book of health plans. I have already built that exact loop once.

The core proof is Sensata: **competitive battlecards and buyer personas** built from 30+ real customer interviews, enabling 50+ reps to a 30% win-rate lift, with a \$2M+ product launch owned end to end alongside it.

The regulated-buyer instinct behind that work came from clean energy and aerospace compliance, the closest parallel to how a health-plan buyer evaluates a claim. What transfers immediately is the mechanics this role is built around: research to battlecard to enablement to reference, on a repeatable cadence.
