

PITCH DECK | CISCO PRICING BUSINESS ANALYST

Cisco prices thousands of SKUs across hardware, software and services. I have already closed the exact gap this role is built to close, at smaller scale.

Margin recovery, discount governance and cross-functional process fixes from someone who builds pricing tools on the side.

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

53% to 61% distributor margin lift via repricing logic that stuck

1,200 pricing opportunities ranked against a \$627M target, 3 regions

PriceKeel - founder of a decision-integrity layer for B2B deal pricing

+12% YoY revenue, +8% share via price realignment vs. 10+ competitors

The problem is not that Cisco lacks pricing data. It is that **margin leakage hides inside scale.**

What a portfolio this size runs into

Thousands of SKUs across hardware, software and services, sold direct and through a large partner and distributor network, mean pricing exceptions and discount requests come from every direction at once.

Every exception that gets approved without a clear, auditable reason becomes a small margin leak, and small leaks compound fast across a portfolio this size.

The fix is not more dashboards. It is a repeatable way to spot the leak, explain it in the language Sales and Finance both accept, and make the correction hold.

What I have already run, at smaller scale

At **Sensata**, I ran the Bleeders and Leakers program: a Power BI system that ranked pricing opportunities against a hard revenue target, by region and product line, so leadership knew exactly where to act.

I did not stop at finding the leak. I **repriced the underlying distributor logic**, which is why the 53 percent to 61 percent margin gain held past the first quarter.

I am now building **PriceKeel**, a tool that gives Finance an audit trail for every discount decision, because the leak usually comes back if nobody can explain why the last exception was approved.

A Pricing Business Analyst role that develops creative solutions to pricing and business challenges, and drives cross-functional margin and process improvement, is describing this exact loop: find the leak, fix the logic behind it, make the fix explainable enough to survive the next reorg.

What the Pricing Business Analyst opening asks for, and where the proof sits.

What the role covers

"Develops creative solutions for pricing and business challenges."

"Collaborates cross-functionally on process and margin improvement."

Pricing Business Analyst family, San Jose, working across a large multi-product organization.

My Proof

Bleeders and Leakers program at Sensata: built the dashboard, found \$433M in surfaced margin gaps, then closed \$700K+ of it in 2 quarters through negotiated fixes, not just a report.

Cross-functional by necessity: the 53% to 61% distributor repricing required sign-off from Finance on the model and from Sales on what a partner would actually accept.

Applied Materials today: partner with Sales, Engineering and Accounts to turn field input into one pricing view across multiple semiconductor product groups.

Process improvement as a habit, not a project: PriceKeel exists because I kept seeing the same discount-exception problem and decided to build the fix instead of re-solving it manually each time.

Bleeders and Leakers: find the leak, close it, make it hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

The same BU also ran a price-increase model flagging line items where a change could lift profitability more than 50 percent, and multimillion-dollar customer quotes built alongside senior executives. The common thread: every fix was cross-functional and every fix was measured after it shipped.

What the first month on a Cisco pricing desk looks like.

WEEK 1 Map the exceptions Pull the last 90 days of discount exceptions and pricing requests by product line and region. Sit with Sales, Finance and the deal desk to hear where the current process creates friction, and where the same exception keeps getting re-approved. ----- Why first: the leak is usually visible in the data before anyone has named it out loud. Same move that started the Bleeders and Leakers program.	WEEK 2-3 Rank and pressure-test Build a ranked view of the top margin opportunities against a real target, then pressure-test the top 3 with Sales and Finance before proposing a fix. Ship one repricing or process recommendation with a documented, auditable reason. ----- Why now: ranking against a hard target, then verifying the fix cross-functionally, is what made the 53% to 61% distributor gain stick.	WEEK 4 Make it repeatable Turn the one-off fix into a template: a dashboard view, an approval reason format, and a checklist Sales and Finance both sign off on before the next exception request comes in. ----- Why this fast: creative solutions matter less if they only work once. Repeatability is the actual ask behind "process improvement."
--	---	---

CLOSE

You are hiring someone to close margin gaps at scale. I have already done it at meaningful scale, and I am building the tool for the next scale up.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and **+12% YoY revenue with +8% market share** from price realignment against 10+ competitors, all run cross-functionally with Sales and Finance while carrying P&L targets for the BU.

What is harder to find is someone who has also spent the last several months building the discount-governance product that a pricing organization like Cisco's would eventually want internally. **I am building that at PriceKeel right now**, which means process-improvement instinct is not something I would need to develop on the job.
