Hiring Team, Neolytix

At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a $627M target across 3 regions, 4 product families and 20 product lines, with a pipeline funnel, regional scorecards and win-rate data that let leadership see exactly where $433M in margin was sitting unaddressed and prioritize it by salesperson and product line. That is the same instinct a Chief of Staff role needs for financial analysis and investor materials: turn a sprawling, multi-geography data set into one view the CEO can act on without re-asking the question.

I am also the sole operator behind PriceKeel, a B2B SaaS pricing company I founded and am now raising a first round for. I built the product myself, set up the CRM, CPQ, forecast and pipeline reviews, and built an audit trail that records every pricing decision with evidence Finance can audit, because closing a round means the numbers have to hold up to scrutiny before anyone asks for them. That same instinct, building something that can withstand scrutiny before you need it to, is what diligence-ready documentation and investor-grade presentation work actually require.

Before that, at Pixis, I hired and managed an 8-person team running 8 client accounts at once, each with its own budget between $15K and $90K a month, and cut churn 50% by staying ahead of each account instead of reacting to the one that complained loudest. I have also led a 5-consultant team through a market-sizing and entry-feasibility project for Safran, with personas across four verticals including healthcare, and presented the findings straight to their leadership. Both are the same muscle your posting calls for: managing several external relationships on different clocks without letting any of them slip.

Neolytix's move from a services-led model to a technology-enabled platform, across Chicago, Gurugram and Manila, is the kind of multi-geography, high-ambiguity operation where I do my best work, and I can run the Eastern-overlap schedule the role needs. I carry P&L and revenue targets at Applied Materials today and automate the parts of that reporting cycle I can with AI agents built on Claude, so more of the week goes to the judgment calls, which is what I would want to bring to the CEO's office here.
