Hiring Team, LangChain

Your posting draws a hard line between clicks and pipeline, and that line is where I have spent most of my career. At Plug Power I owned Paid Search and Paid Social across Google Ads, Microsoft Ads, Meta and LinkedIn on $100K/month budgets, and the win was not more clicks, it was cutting CPA 25% and cost per lead 50% by tying bid strategy and landing-page changes to the stage-1 opportunities that came out the other end, not the form fills in the middle.

Feed and catalog work is where I have had to be the most literal about "own the whole experience." At GenY Medium I rebuilt Google Merchant Center and Meta catalog feeds from the ground up for D2C brands and took ROAS to 16x, which only happens if you treat the feed, the bid strategy and the landing page as one system instead of three separate jobs. I ran a version of your branded, non-branded, competitor split at Plug Power too, and closed the keyword-strategy gaps that were quietly bleeding spend before they ever showed up in CPA.

The part of this role I find genuinely interesting is the ChatGPT advertising line, because I have already built the habit your posting is asking for: testing a new channel before anyone has written the playbook for it. At Pixis, an AI advertising platform, I ran retail media across Amazon Ads and Criteo for an eight-client portfolio where budgets and formats shifted constantly, and I reach for that same build-the-playbook-as-you-go instinct every day now automating reporting and campaign QA with Claude agents as Strategic Marketing III at Applied Materials. Agent-based tooling is not a new concept I would be ramping up on, it is the thing I already use before I would be testing it as an ad channel.

I would like to bring that paid-search-to-pipeline discipline to LangChain's growth engine. Proof trail at adhi-growth-ai.vercel.app/ref/langchain. Happy to talk whenever works on your side.
