Hiring Team, Amazon Web Services (AWS)

A value proposition only lands when it starts from the customer's actual use case, not the spec sheet. At Sensata, I built the KPI frameworks myself, in SQL and GA4, across 50,000-plus connected industrial devices, and used what they showed about adoption to define the customer profiles a new product line's launch was built around, positioning that lifted conversion 15% on priority launches and drove $2M-plus in first-year revenue. AWS Databases is asking for the same motion at cloud scale: work backwards from the customer's use case, synthesize the market intelligence, and make the technical capability legible as value.

Direct evidence of fit:

- Owned end-to-end GTM for a new, engineering-heavy Sensata product line across North America and Europe (positioning, messaging, launch naming and channel), driving $2M+ first-year revenue and +35% qualified leads.
- Built KPI frameworks in SQL and GA4 across 50,000+ connected devices, turning device-level data into the market intelligence that shaped launch strategy and lifted feature adoption 18%.
- Build forecasting and value-based pricing models at Applied Materials with Sales and Engineering input, synthesizing technical and commercial signal into one market view.
- Armed 50+ reps with field enablement content (decks, case studies, battlecards) that lifted win rates 30% against entrenched incumbents.

What I bring is practice at the seam between deep technical input and the story a buyer acts on: synthesizing data from Engineering, Sales and direct customer interviews into one view, then shaping the positioning, launch plan and enablement that carries that view to the field. I run that translation daily as Strategic Marketing III at Applied Materials, where I automate the repetitive side of market and competitive analysis with Claude AI agents so the strategic work, the part a model cannot do, gets more of my time, not less. A 200-plus-service portfolio like AWS's only turns into a coherent customer story when someone is doing that synthesis on purpose, and that is the work I want to do here.

Proof trail at adhi-product-ai.vercel.app/ref/aws if you want to see the GTM and enablement work firsthand.
