

PITCH DECK | QUEST SOFTWARE STRATEGIC PRICING LEAD

Quest prices across cybersecurity and platform management portfolios at once. I have already closed the exact margin gap this role is built to close, at smaller scale.

Pricing strategy development, competitive analysis and financial modeling from someone who builds pricing tools on the side.

\$700K+ margin recovered in 2 quarters, Sensata Bleeders and Leakers program

53% to 61% distributor margin lift via repricing logic that stuck

1,200 pricing opportunities ranked against a \$627M target, 3 regions

PriceKeel - founder of a decision-integrity layer for B2B deal pricing

+12% YoY revenue, +8% share via price realignment vs. 10+ competitors

The problem is not that Quest lacks pricing data. It is that **margin leakage hides across two portfolios sold together.**

What running two portfolios at once runs into

Cybersecurity and platform management get sold side by side, on the same accounts, often on the same quote, so a discount granted on one line has to make sense next to the price on the other.

Every exception approved without one coherent pricing strategy, not two disconnected ones, becomes a small margin leak, and small leaks compound fast across a multi-product portfolio.

The fix is not more competitive analysis in a vacuum. It is financial modeling and cross-functional collaboration that turn that analysis into a pricing decision Sales and Finance both hold to.

What I have already run, at smaller scale

At **Sensata**, I led global pricing strategy for a multi-\$100M Industrial BU across multiple product lines at once, the same "more than one portfolio, one pricing logic" problem.

I ran the **Bleeders and Leakers program**: a Power BI system that ranked pricing opportunities by region and product family against a hard revenue target, so leadership knew exactly where to act.

I am now building **PriceKeel**, a tool that gives Finance an audit trail for every discount decision, because the leak comes back if nobody can explain why the last exception across a portfolio was approved.

A Strategic Pricing Lead who develops pricing strategy, runs competitive analysis and financial modeling, and collaborates cross-functionally across cybersecurity and platform management, is describing this exact loop: one pricing logic for two portfolios, proven with a model, and held together across teams.

What the Strategic Pricing Lead opening asks for, and where the proof sits.

What the role covers

- "Pricing strategy development, competitive analysis, financial modeling, and cross-functional collaboration across cybersecurity and platform management portfolios."*
- "5+ years of experience in pricing strategy, product management, product operations, management consulting, revenue operations, business strategy, or related analytical roles."*
- Remote US, up to 20% travel for strategic planning and customer engagements.*

My Proof

- Pricing strategy development:** led global pricing strategy for Sensata's Industrial BU, a multi-\$100M business spanning multiple product lines, while carrying P&L and revenue targets.
- Competitive analysis and financial modeling:** built the Bleeders and Leakers Power BI dashboard, surfaced \$433M in margin gaps, then closed \$700K+ of it in 2 quarters through modeled, negotiated fixes.
- Cross-functional collaboration:** the 53% to 61% distributor repricing required sign-off from Finance on the model and from Sales on what a partner would actually accept.
- Applied Materials today:** partner with Sales, Engineering and Accounts to turn field input into one pricing strategy across multiple technical product groups.

Bleeders and Leakers: find the leak, close it, make it hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

The same BU also ran a financial model flagging line items where a price change could lift profitability more than 50 percent, and multimillion-dollar customer quotes built alongside senior executives. The common thread: every fix crossed at least two functions, and every fix was measured after it shipped.

What the first month on Quest's pricing desk looks like.

WEEK 1 Map both portfolios Pull the last 90 days of discount exceptions and quotes spanning cybersecurity and platform management. Sit with Sales, Finance and Product to hear where a single-portfolio pricing rule breaks down on a two-portfolio deal. ----- Why first: the leak is usually visible in the data before anyone has named it out loud. Same move that started the Bleeders and Leakers program.	WEEK 2-3 Model and pressure-test Build a financial model ranking the top pricing-strategy opportunities against a real target, then pressure-test the top 3 with Sales and Finance before proposing a fix. Ship one pricing recommendation with a documented, cross-functionally-agreed reason. ----- Why now: modeling against a hard target, then verifying the fix cross-functionally, is what made the 53% to 61% distributor gain stick.	WEEK 4 Make it repeatable Turn the one-off fix into a template: a competitive-analysis view, a financial-modeling format and a checklist Sales and Finance both sign off on before the next cross-portfolio pricing question comes in. ----- Why this fast: pricing strategy matters less if it only works once. Repeatability is the actual ask behind "cross-functional collaboration."
--	---	---

CLOSE

You are hiring someone to run pricing strategy across two portfolios at once. I have already run it across multiple product lines, and I am building the tool for the next scale up.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and **+12% YoY revenue with +8% market share** from price realignment against 10+ competitors, all run cross-functionally with Sales and Finance while carrying P&L targets for the BU.

What is harder to find is someone who has also spent the last several months building the discount-governance product a pricing organization at Quest's scale would eventually want internally. **I am building that at PriceKeel right now**, so the cross-functional pricing-strategy instinct this role asks for is not something I would need to develop on the job.
