PITCH DECK | SALESFORCE PRICING STRATEGY MANAGER/SENIOR MANAGER

Every new cloud and every Agentforce SKU adds a packaging decision. I have already run that exact pricing-and-packaging loop on a multi-$100M portfolio.

Pricing and packaging strategy, data-driven recommendations and EVP/SVP-level communication from someone who builds pricing tools on the side.

- **$700K+** margin recovered in 2 quarters, Sensata Bleeders and Leakers program
- **53% to 61%** distributor margin lift via a repriced model that stuck
- **$433M** in margin gaps surfaced across 3 regions, 4 product families
- **PriceKeel** - founder of a decision-integrity layer for B2B deal pricing
- **+12% YoY revenue, +8% share** via price realignment vs. 10+ competitors

WHY THIS DECK EXISTS

The problem is not that Salesforce lacks pricing data. It is that every new SKU has to earn its place without breaking the base that already exists.

What a widening portfolio runs into

CRM, Agentforce and a growing set of clouds get sold on the same account, often the same quote, so a new pricing model or SKU has to make sense next to every price already on the books.

A packaging decision made in isolation from Product, GTM, Sales and Deal Desk becomes a renegotiation six months later, and that renegotiation costs more than getting the SKU right the first time.

The fix is not more market research in a vacuum. It is a structured hypothesis-test-recommend process that reaches an EVP/SVP decision before the SKU ships, not after a quarter of customer confusion.

What I have already run, at smaller scale

At **Sensata**, I led global pricing strategy for a multi-$100M Industrial BU across multiple product lines at once, the same "one pricing logic across many lines" problem.

I ran the **Bleeders and Leakers program**: a Power BI system that ranked pricing opportunities by region and product family against a hard revenue target, so leadership knew exactly where to act and why.

I am now building **PriceKeel**, a tool that gives Finance an audit trail for every discount decision, because a pricing change that cannot be explained to the existing base is the change that gets reversed.

A Pricing Strategy Manager/Senior Manager who develops long-term pricing and packaging strategies, makes data-driven recommendations and nurtures EVP/SVP relationships is describing this exact loop: one pricing logic across a growing portfolio, proven with a model, and held together across teams.

THE REQ, MAPPED

What the Pricing Strategy opening asks for, and where the proof sits.

What the role covers

> *"Develop and optimize long term pricing and packaging strategies... working across Product Management, Product Marketing, Go To Market, Sales and Deal Desk."*

> *"Make informed data-driven recommendations using structured problem solving frameworks... create hypotheses, analyze data, validate hypotheses, make recommendation."*

> *"Clearly communicate pricing concepts... nurture EVP/SVP level relationship; influence senior executives to gain alignment."*

My Proof

Long-term pricing and packaging strategy: led global pricing strategy for Sensata's Industrial BU, a multi-$100M business spanning multiple product lines, while carrying P&L and revenue targets.

Hypothesis, analyze, validate, recommend: built the Bleeders and Leakers program on exactly that loop, turning competitive and willingness-to-pay data into $700K+ recovered in 2 quarters.

EVP/SVP alignment: partnered with senior executives on AP26 revenue models and multimillion-dollar customer quotes, translating pricing concepts into decisions leadership could act on.

Cross-functional execution: the 53% to 61% distributor repricing required sign-off from Finance on the model and from Sales on what a partner would actually accept.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the leak, close it, make it hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by salesperson and product line.

$433M

Margin Gaps Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay so leadership could prioritize instead of chasing anecdotes.

$700K+

Margin Recovered in 2 Quarters

Closed through cross-functional negotiations with Sales and Finance, built on data, not across-the-board price hikes.

53% to 61%

Distributor Margin Lift

Repriced the channel logic itself, so the gain held across the existing distributor base instead of drifting back within a quarter.

The same BU also ran a financial model flagging line items where a price change could lift profitability more than 50%, and multimillion-dollar customer quotes built alongside senior executives. The common thread: every pricing move crossed at least two functions, was validated against the existing base before it shipped, and was measured after it shipped.

FIRST 30 DAYS

What the first month on Salesforce's Pricing Strategy team looks like.

WEEK 1

Map the portfolio and the base

Pull the last 90 days of packaging and SKU decisions across the products this seat touches. Sit with Product Management, Product Marketing, GTM, Sales and Deal Desk to hear where a new SKU already strained an existing customer's contract.

Why first: the leak is usually visible in the data before anyone has named it out loud. Same move that started the Bleeders and Leakers program.

WEEK 2-3

Build the hypothesis and validate it

Pick one pricing or packaging question with real exec visibility, form a hypothesis, test it against customer and competitive research, then pressure-test the recommendation with Sales and Deal Desk before it reaches EVP/SVP leadership.

Why now: hypothesis-test-recommend, then verify it cross-functionally, is what made the 53% to 61% distributor gain stick.

WEEK 4

Make the recommendation repeatable

Turn the first recommendation into a template other product lines can reuse: a competitive-research view, a validation checklist and an EVP/SVP-ready narrative for the next pricing or packaging decision.

Why this fast: a pricing recommendation matters less if it only works once. Repeatability is the real ask behind "cross-functional expertise."

CLOSE

You are hiring someone to develop pricing and packaging strategy across a growing portfolio. I have already run that loop on a multi-$100M business, and I am building the tool for the next scale up.

The core proof is Sensata: **$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and **+12% YoY revenue with +8% market share** from price realignment against 10+ competitors, all run cross-functionally with Product, Sales and Finance while carrying P&L targets for the BU.

What is harder to find is someone who has also spent the last several months building the discount-governance product a pricing organization at Salesforce's scale would eventually want internally. **I am building that at PriceKeel right now**, so the hypothesis-test-recommend instinct this role asks for is not something I would need to develop on the job.
