Hiring Team, Decagon

Your posting for the Revenue Operations Associate asks for someone who can own account and opportunity data, process deals and renewals, and turn CRM records into reports and dashboards GTM leadership actually uses. That is the job I built for myself inside Sensata's Bleeders and Leakers program: a Power BI dashboard tracking 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate, avg \$/win and stage distribution owned down to the salesperson and product line. It replaced a set of spreadsheets nobody trusted with one system Sales and Finance both signed off on.

A dashboard is only as good as the data underneath it, so I ran the audits myself. Checking CRM records against that same dashboard caught mismatched product-line tags and stale pipeline stages before they skewed a report leadership was about to act on, and it is the same data quality and integrity work your Revenue Operations team runs on its own systems. I did not wait to be told the tags were wrong; fixing that was the job.

I run a version of that same operating loop today at PriceKeel, where I own the CRM and CPQ, account and opportunity ownership, deal processing and renewals, and forecast and pipeline reviews end to end, and built the audit trail that gives Finance one documented record of every discount decision. At Applied Materials I build forecasting and market-sizing models across multiple product groups and keep automating the recurring parts of that work with Claude AI agents, the kind of process streamlining your documentation and project management work asks for.

Decagon is scaling a GTM org fast enough that account ownership, territory operations and pipeline data can drift out of sync if nobody owns the definitions day to day. I would bring the same habit that held at Sensata: get into the CRM record itself, fix what is broken before it is escalated, and leave behind a dashboard and a process doc the next person can trust. Proof trail at adhithyabhaskar.vercel.app/ref/decagon.
