Hiring Team, Aramya

Your posting names a specific bar: graduation from a tier 1 college, IIT, NIT or BITS. I'm BITS Pilani, mechanical engineering. The degree gets me in the door; what should actually decide this is what I've built since. Right now I'm building PriceKeel, a B2B SaaS pricing company, from a blank page: I designed the product myself, set up the company's CRM, CPQ and deal approvals, and I'm running pilots and raising a first round with no roadmap handed to me. That is the hardcore 0 to 1 work your posting describes, and it is also just how I like to work.

The closer analog to what Aramya is building is retail, not boardroom strategy. At Pixis I ran an 8-client D2C portfolio and delivered 3x ROAS in one month for a fashion brand through a full-funnel rebuild: shopping feed cleanup, bidding, creative and lookalike expansion. At GenY Medium I rebuilt Google Merchant Center and Meta catalog feeds for D2C brands and pushed ROAS to 16x. Those are the same retail performance problems a 16-store footprint across two cities, with three more opening next, keeps generating, and the playbooks that fix them (feed hygiene, bidding, creative, catalog structure) carry over directly to a fashion and lifestyle brand.

Before PriceKeel, I built SwipeHire the same way, alone: wrote the PRD, scoped the MVP, shipped it, and got it to 50+ early users. Your posting is honest that this role tests grit more than it rewards comfort, and that it turns into a Business, Product or Operations lead seat in 12 to 18 months once someone proves they can take a messy problem to a result. That is the exact shape of what I have already done twice.

I would like to talk about which of Aramya's 0 to 1 problems, across the three brands, you would hand an EIR first. Proof trail at adhi-growth.vercel.app/ref/aramya.
