Hiring Team, SpaceXSI

Your posting asks for someone who can start as a generalist across Customer Success and then own segmentation, coverage and capacity end to end, the kind of role where the first deliverable is usually the framework that decides who gets white-glove coverage and who gets a digital motion. I built that exact framework at Sensata: a dashboard that segmented 1,200 pricing opportunities across 3 regions, 4 product families and 20 product lines against a $627M target, with win-rate and stage views built for frontline teams and leadership to work from, not just read.

The signal-to-play half of your posting, turning product usage into activation, expansion and retention plays, is work I have already been graded on. At Sensata I built KPI frameworks in SQL and GA4 across 50K+ connected industrial devices, finding the high-intent cohorts and adoption signals that lifted feature adoption 18%, and ran 30+ customer interviews that raised CSAT 22%. At Pixis I ran an 8-person team across 8 client accounts, cutting churn 50% by turning account-level signals into repeatable vertical playbooks instead of one-off saves, while carrying the P&L for the portfolio myself.

The experimentation piece maps to the 15+ A/B tests I ran at Plug Power with clear hypotheses and control groups, tied back to MQL quality and stage 1 pipeline, not vanity lift numbers. And the "build a strategy and operations function from the ground up" line in your preferred qualifications is what I am doing right now at PriceKeel: I own its CRM, CPQ, quote-to-approval workflow and the Finance audit trail behind it myself, before handing any piece of it to a hire. I automate the recurring parts of that same analysis with Claude AI agents at Applied Materials today, so a review starts from a flagged pattern instead of a blank spreadsheet.

What I would bring to this seat is someone who has already built the segmentation, the KPI dashboards and the churn playbooks your posting describes, at a scale well past a pilot, and who is comfortable being the first person to build the operating cadence rather than inheriting one. Proof trail at adhithyabhaskar.vercel.app/ref/spacexsi.
