PITCH DECK | CERIBELL SR. MANAGER OF COMMERCIAL STRATEGY AND OPERATIONS

# A commercial strategy seat needs someone who already turns a forecast, territory or pipeline signal into a call leadership can act on. I have run that loop against a $627M book.

*Capacity and PO forecasting models, territory design, pipeline cadence reviews, and the dashboards and executive packages that align VPs, Regional Directors and Territory Managers.*

- **$627M** pipeline, 1,200 opportunities, $433M in margin gaps surfaced
- **$700K+** recovered in 2 quarters through root-cause pricing fixes
- **53% to 61%** distributor margin lift via territory-design repricing
- **AP26 revenue models** built alongside senior executives
- **Claude AI agents** automating recurring forecasting and analysis

WHY THIS DECK EXISTS

# A commercial strategy seat does not lack candidates who can build a dashboard. It lacks someone who has already run forecasting, territory and pipeline calls against a nine-figure book, and shipped the executive package behind each one.

### What this seat runs into

A capacity or PO forecast has to turn into a recommendation before the quarter closes, not after, and it has to survive contact with VPs, Regional Directors and Territory Managers at once.

Territory and coverage calls need a diagnostic framework behind them, not a one-off spreadsheet, or the next restructuring repeats the same root cause.

Most candidates have built a dashboard. Fewer have owned the business outcome when the pricing or territory call behind it was wrong.

### What I have already run, at comparable scale

At **Sensata**, I built a $627M-target pipeline dashboard and ran the root-cause and territory-repricing calls it surfaced, closing $700K+ in two quarters.

At **Applied Materials** now, I build forecasting and market-sizing models across product groups and automate the recurring analysis with Claude AI agents.

At **PriceKeel**, I run CRM, CPQ, forecast and pipeline reviews and deal approvals myself, the full operating stack this seat partners across.

**This req asks for capacity and PO forecasting, territory design and coverage strategy, pipeline cadence reviews, KPIs and dashboards, root-cause analysis, genAI-enabled automation, and executive review packages. That is the loop above, run against a real nine-figure book.**

THE REQ, MAPPED

# What the Commercial Strategy and Operations opening asks for, and where the proof sits.

## What the role covers

> *"Drive forecasting, territory design, and capacity models, while establishing operational KPIs, dashboards, and strategic performance metrics."*

> *"Conduct root-cause analysis on quarterly performance; develop repeatable diagnostic frameworks; draft presentations for VP reviews."*

> *"Hands-on experience using generative AI tools (e.g., Claude, ChatGPT, Copilot) and automation."*

## My Proof

**Bleeders and Leakers at Sensata:** capacity, forecasting and KPI dashboard against a $627M target, with pipeline funnel, win rate and stage distribution for executive review.

**$700K+ recovered, 53% to 61% distributor margins:** root-cause analysis and territory-design repricing calls, not a one-off fix.

**AP26 revenue models and OKR/quarterly review cadence:** built and presented alongside senior executives, the VP-review and forecast-accuracy discipline this role runs on.

**Claude AI agents automating recurring analysis:** the generative-AI and automation line this posting names directly, running today at Applied Materials.

THE SENSATA PROOF, IN DEPTH

# Bleeders and Leakers: capacity, forecasting and territory calls against a $627M book.

Built as a Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate, avg $/win and stage distribution feeding the monthly executive review package.

**$433M**

**Margin Gaps Surfaced**

Root-cause analysis ranked every risk into one view instead of chasing anecdotes region by region.

**$700K+**

**Recovered in 2 Quarters**

Closed through diagnostic frameworks built from competitive gaps and documented willingness to pay.

**53% to 61%**

**Distributor Margin Lift**

A territory-design and coverage-strategy call, run through the distribution channel.

The same seat carried AP26 revenue models and multimillion-dollar customer quotes alongside senior executives. The common thread: every case started from a forecast or territory signal and ended in a recommendation leadership could act on.

FIRST 30 DAYS

# What the first month on Ceribell's commercial strategy desk looks like.

WEEK 1

### Map capacity and pipeline by territory

Sit with VPs, Regional Directors and Territory Managers to build one view of capacity, forecast and pipeline health by territory, the same first move that built the Bleeders and Leakers dashboard at Sensata.

**Why first:** a forecasting or territory call is only as good as the capacity-and-pipeline view it is built on.

WEEK 2-3

### Run the first root-cause pass

Pressure-test 2 to 3 live performance or coverage gaps with Sales and Operations, and draft the diagnostic framework and business case for the first recommended call.

**Why now:** building the recommendation against a real signal, not in a vacuum, is what made the 53% to 61% distributor gain hold at Sensata.

WEEK 4

### Ship the first executive review package

Identify one genAI-enabled workflow to automate in the forecasting or KPI-reporting cycle, and present the first VP-review package that aligns Sales, Finance and Operations.

**Why this fast:** the same habit that keeps Claude agents running recurring forecasting analysis at Applied Materials today.

CLOSE

# You are hiring someone to turn capacity, territory and pipeline signals into calls your commercial leadership can act on. I have been running that loop against a nine-figure book for a year.

The core proof is Sensata: **$700K+ recovered in 2 quarters** and a **53% to 61% distributor margin lift**, both run through a $627M-target Power BI pipeline I built myself.

What is harder to find is someone running that same discipline right now: at **Applied Materials**, I build forecasting models and automate recurring analysis with Claude AI agents, and at **PriceKeel** I run the full CRM, CPQ, forecast and deal-approval stack I sell into RevOps, Sales and Finance without anyone assigning me the work.
