Hiring Team, Ceribell

Your posting asks for someone who can turn a cost, coverage or pipeline signal into a forecasting or territory call before the quarter closes. I built that exact loop at Sensata: I led the Bleeders and Leakers program, a Power BI dashboard tracking 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, and used it to recover $700K+ in margin in two quarters.

The same dashboard's win-rate and stage-distribution views drove a territory-design call: I raised distributor and channel-partner margins from 53% to 61% by repricing parts sold through specific distribution routes. I also modeled AP26 revenue forecasts and multimillion-dollar customer quotes directly with senior executives, the capacity-planning and forecast-accuracy work this role runs on the Territory Manager and Strategic Account Manager side, and ran the OKRs, weekly reviews and executive review packages that kept Pricing, Finance and Sales aligned on each call.

The generative-AI line in your posting is one I already live in. As Strategic Marketing III at Applied Materials, I automate repetitive forecasting and pricing analysis with AI agents built on Claude. I run the same instinct at PriceKeel, the company I founded, where I set up and run the CRM, CPQ, forecast and pipeline reviews and deal approvals myself, and sell the product into RevOps, Sales leadership and Finance without anyone assigning me the work. That is the cross-functional influence without direct authority your Territory Managers, Regional Directors and Health System leaders will need from this seat.

Ceribell's EEG platform is scaling fast across hundreds of hospitals and major IDNs, and a growth curve like that needs the forecasting and territory discipline behind it to scale just as fast. I would like to bring that discipline to your commercial team. Proof trail at adhithyabhaskar.vercel.app/ref/ceribell.
