Hiring Team, Google

At Sensata, I took a new product line from zero to $2M+ in first-year revenue by owning positioning and launch end to end, then wrote the sales-enablement narrative that lifted win rates 30% across 50+ reps. That is the GTM muscle Google Classroom's next wave of generative AI features needs: turn real product capability into language an institutional buyer trusts, then get the field and the channel moving behind it on one date.

The cross-functional span of this role is familiar territory. At Sensata, my GTM work sat across Engineering, Sales and distribution partners in North America and Europe; the value propositions I wrote turned deep technical detail into the kind of simple, concrete language that lifted conversion 15% on priority launches. At Applied Materials today, I run that same translation work for a fast-moving technical market, pairing value-based pricing narratives with AI agents built on Claude to keep the recurring analysis moving faster than I could by hand. A Classroom launch adds Product, UX, PR and Legal to that table. More partners, same job: one message, one date, no slippage.

I also know what it takes to build messaging that survives scrutiny instead of just sounding good in a deck. Thirty-plus customer interviews with OEMs and distributors at Sensata fed straight into positioning changes that raised CSAT 22%, and the sales materials I wrote for 50+ reps had to hold up against technical objections in the room, not just land well on a first read. Student data privacy and administrative AI controls are a different kind of sensitive, but the discipline, get the message right before it reaches the person who has to trust it, travels.

I would rather make the rest of this case directly than from a resume line. Proof trail at adhi-product-ai.vercel.app/ref/google. Happy to talk whenever works on your side.
