Hiring Team, Verkada

A renewals seat lives or dies on one question: will the number in the forecast still be true in 30 days. I built the Excel and Power BI tooling that answered that question for a \$627M pipeline at Sensata, reconciling 1,200 pricing and bookings opportunities across 3 regions, and I cut client churn 50% at a prior company by catching the accounts that were drifting before the renewal conversation even started. That is the instinct your posting is asking for: analytical, process-minded, and comfortable owning a number that Sales, Finance and Customer Success all have to trust.

The contract-renegotiation part of this role is not new work for me either. At Sensata I raised distributor and channel-partner margins from 53% to 61% in under two quarters by repricing and re-contracting parts sold through distribution, deal by deal, using competitive gaps and customer willingness-to-pay data. I run that same discipline today as founder of PriceKeel: I set up and operate the CRM and CPQ configuration myself, including deal approvals and forecast and pipeline reviews, and I built the audit trail that gives Finance an explainable record behind every exception. Excel is where that work actually happens day to day; SQL and Power BI are where I take it once the volume outgrows a spreadsheet.

One opinion I would bring to this seat: renewals ops gets treated as a tracking function more often than it should be. The Bleeders and Leakers dashboard I built only mattered because it told leadership which \$433M of the gap to chase first, not just that a gap existed. I would want the same thing here, using the renewal data to flag which accounts need a strategy conversation weeks before the date on the contract, not a status update after. Proof trail at adhithyabhaskar.vercel.app/ref/verkada.

I would welcome the chance to talk through how this maps to Verkada's renewals book.
