Hiring Team, Ironclad

Your posting asks for someone who builds and maintains the models that guide capacity, coverage, segmentation and forecast accuracy, and that is close to the exact dashboard I already built running Sensata's Bleeders and Leakers program: 1,200 pipeline opportunities tracked against a $627M target across 3 regions, 4 product families and 20 product lines, with win rate, average $/win and stage distribution broken out by salesperson. Leadership ran its business reviews off that one model instead of five different spreadsheets.

The role also wants someone who owns the operating cadence itself, not just the dashboard underneath it. As founder of PriceKeel I run the company's own CRM and CPQ, forecast and pipeline reviews, and deal approvals, and I built the audit trail that gives Finance a record it can act on instead of a gut call. That is the same discipline a Sales Ops seat needs: a cadence Sales and GTM leadership can trust because the number behind it is defensible, not just well formatted.

I am also already doing the AI-assisted side of this job. As Strategic Marketing III at Applied Materials I automate repetitive revenue and market analysis with AI agents built on Claude, which frees time for the judgment calls a model cannot make on its own, the exact habit your posting calls out by name.

Annual planning, territory design and quota setting round out what I would bring. At Sensata I carried P&L and revenue targets for a multi-$100M business and partnered with senior executives on next-year revenue models and multimillion-dollar customer quotes, and at Plug Power I built the budget plans and forecasts that went to leadership for approval every quarter.
