PITCH DECK | IRONCLAD SALES OPERATIONS ANALYST

Ironclad's Sales Ops seat needs one pipeline model that capacity, coverage and segmentation planning can all run from, and a cadence sharp enough that leadership acts on it without re-checking the number. I have already built and run that model twice.

Proven on a 1,200-opportunity, $627M-target pipeline model at Sensata and a self-run CRM, CPQ and forecast cadence at PriceKeel, now paired with AI-assisted analysis using Claude agents.

- **$627M Target Model** - 1,200 opportunities, 3 regions, 4 product families, 20 product lines
- **$700K+ Margin Recovered** - 2-quarter Bleeders and Leakers program
- **CRM/CPQ Owned End to End** - PriceKeel forecast, pipeline reviews, deal approvals
- **+12% YoY Revenue** - price realignment vs. 10+ competitors
- **Claude AI Agents** - automating repetitive revenue analysis today

WHY THIS DECK EXISTS

Owning pipeline and performance insights means a number leadership trusts enough to act on. That is a modeling-plus-cadence discipline, not a reporting task.

What the mandate actually requires

Analytical models for capacity, pipeline coverage, attainment, segmentation and territory design that hold up under question.

A disciplined operating cadence across segments and motions, with forecast support and pipeline inspection that stays consistent week over week.

Cross-functional alignment with Finance and Systems so planning, data quality and process improvements move together.

What I have already built at that layer

Built the **FY2026 Bleeders and Leakers pipeline model**: 1,200 opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with win rate and stage distribution by salesperson.

Run **CRM, CPQ, forecast and pipeline reviews, and deal approvals** end to end as founder of PriceKeel, with an audit trail Finance can act on.

Carry **P&L and revenue targets** at Applied Materials, building forecasting models and running OKRs through weekly and quarterly business reviews.

> **The through-line: the Sales Ops analyst mandate is a modeling-plus-cadence discipline I have already run twice, once on a multi-$100M pipeline and once on a company's entire revenue stack that I built myself.**

THE MANDATE, MAPPED

What the role covers, and where the proof already sits.

What the role covers

> *Build and maintain analytical models (capacity, pipeline coverage, attainment, segmentation, territory design) to inform near-term execution and long-range planning.*

> *Own pipeline and performance insights, proactively identifying risks and opportunities across stages, segments and use cases.*

> *Drive operating cadence and execution rigor, including forecast support, pipeline inspection, and business reviews.*

My proof

Sensata pipeline model: 1,200 opportunities, $627M target, win rate, avg $/win and stage distribution across 3 regions, 4 product families and 20 product lines.

PriceKeel: runs the company's own CRM, CPQ, forecast and pipeline reviews, and deal approvals, with an audit trail for Finance.

Sensata and Applied Materials cadence: AP26 revenue models, customer quotes, and weekly/quarterly OKR business reviews.

THE CLOSED-LOOP PROOF, IN DEPTH

Sensata's Bleeders and Leakers program: a pipeline model built from raw opportunity data to a number executives acted on.

Built as the system of record for a multi-$100M Industrial BU, the same model-to-action loop a Sales Ops analyst runs on Ironclad's pipeline.

1,200 Opps / $627M

Pipeline Model Across 3 Regions, 20 Product Lines

Win rate, avg $/win and stage distribution by salesperson, surfacing $433M in margin gaps for leadership to prioritize.

$700K+ Recovered

Margin Won Back in 2 Quarters

Deal-level negotiations built on competitive gaps and customer willingness to pay, not blanket discount cuts.

+12% YoY / +8% Share

From Price Realignment Vs. 10+ Competitors

Shaped AP26 revenue models and multimillion-dollar customer quotes with senior executives.

The same discipline carries over to PriceKeel, where I run the CRM, CPQ, forecast and pipeline reviews and deal approvals end to end, and to Applied Materials, where I automate repetitive revenue analysis with Claude AI agents today.

FIRST 30 DAYS

What the first month owning Ironclad's pipeline and performance insights would look like.

WEEK 1

Audit today's pipeline data and inspection rhythm

Sit with the Director of Sales Operations, Finance and GTM Systems to find where the data breaks before building a new model on top of it, the same data-quality-first habit behind the Bleeders and Leakers dashboard.

Why first: a capacity or coverage model built on dirty data is worse than no model.

WEEK 2-3

Build the capacity, coverage and segmentation model

Stand up the pipeline-coverage and territory view by segment and motion the same way the Sensata model tracked 1,200 opportunities against a $627M target, pressure-tested with Sales and Finance.

Why now: leadership needs one model before quota and territory decisions get made, not after.

WEEK 4

Ship the operating cadence

Run the first forecast and pipeline-inspection review off the new model, using AI-assisted analysis to accelerate the read, the same cadence discipline I already run at PriceKeel.

Why this fast: a model nobody reviews on a schedule stops being trusted within a quarter.

CLOSE

Ironclad's Sales Ops seat needs someone who has already run the model-to-cadence loop on a multi-$100M business, not someone picking it up for the first time. I have.

The core proof is Sensata's Bleeders and Leakers program: a **1,200-opportunity pipeline model** against a $627M target across 3 regions, 4 product families and 20 product lines, with win rate and stage distribution leadership used to run its business reviews, and **$700K+ in margin** recovered off that model in 2 quarters.

What is harder to find is someone who also built the system underneath the model: as founder of PriceKeel I run CRM, CPQ, forecast and pipeline reviews, and deal approvals end to end, with an audit trail Finance can act on. I bring the same loop to Ironclad's pipeline, and I keep using AI tools to accelerate it, automating repetitive revenue analysis with **Claude agents** at Applied Materials today.
