Hiring Team, Ashby

Your posting asks for early warning on health score, churn and sentiment before they show up in GRR. I built exactly that at Sensata: the Bleeders and Leakers dashboard, tracking 1,200 live pricing exceptions against a $627M target across 3 regions and 20 product lines, flagging $433M in margin risk before it turned into lost revenue. At Pixis I ran the retention side of the same problem directly, hiring and managing an 8-person Customer Success team across 8 client accounts and cutting churn 50% by diagnosing the real risk driver behind each account before building the account strategy and playbooks that fixed it.

The Ashby role is that same operator problem at the next layer up: turning those signals into segmentation, onboarding workflows and playbooks the whole CS team runs on, not just the accounts I touch myself. That is the shape of my Sensata work too. I carried P&L and revenue targets while building the price-increase model and the leadership decks that turned raw numbers into a repeatable process, and it is the shape of planning cycles at Plug Power, where I built the capacity models and forecasts that leadership approved every quarter. HubSpot, Salesforce and Power BI are already in my CRM toolkit from that work, so the systems side of the role, defining requirements and partnering with RevOps on tooling changes, is familiar ground, not a new skill.

The cross-functional piece, getting Sales, Product and CS aligned on one customer journey, is where I already spend most of my time. At Applied Materials I run the weekly and quarterly reviews that keep Sales, Engineering and Accounts on one forecast, and I automate the recurring half of that reporting with AI agents built on Claude so the hours go to judgment calls, like which account needs a different playbook, rather than rebuilding the same report.

I would like to bring that same build-the-system-then-run-it discipline to Ashby's Customer Success team. Proof trail at adhithyabhaskar.vercel.app/ref/ashby.
