

PITCH DECK | SENTRY REVENUE OPERATIONS ANALYST

Sentry's Deal Desk needs someone who has already run quote-to-approval end to end. I have run that loop at \$700K+ scale.

Deal desk ownership, CPQ and Salesforce, and the Analytics pillar that finds the patterns in between.

\$700K+ margin recovered in 2 quarters, deal by deal

53% to 61% distributor margin lift via discount-logic repricing

\$627M pipeline tracked, 1,200 opportunities, \$433M in gaps surfaced

PriceKeel - founder, runs CRM, CPQ and deal-approval workflow end to end

Claude AI agents - automates repetitive deal-review analysis at Applied Materials

The posting names three pillars, Analytics, GTM Technology and Deal Desk, and says half the job is deal desk ownership.

What losing that discipline runs into

A Deal Desk without a real gatekeeper does not fail loudly. It fails as a quote that ships with the wrong discount, an order form that does not match what Sales promised, and an approval that sits in an inbox while a renewal deadline passes.

Analytics, GTM Technology and Deal Desk all touch the same deal record, so a gap in one pillar becomes noise in the other two: bad approval routing shows up as bad pipeline data, and bad pipeline data shows up as a wrong insight in the next report.

The fix is not another approval step. It is someone who has already run quote creation, discount review and approval routing as one system, not three separate queues.

What I have already run, at smaller scale

At **PriceKeel**, I built the CRM, CPQ configuration and deal-approval workflow myself, including the self-service guardrails that let a standard deal route without escalation, then the audit trail that gives Finance an explainable record behind every exception.

At **Sensata**, I led the Bleeders and Leakers program: deal-by-deal review against competitive gaps and customer willingness to pay, recovering \$700K+ in margin in 2 quarters.

Both mean I have already run the Deal Desk pillar end to end, not just the CPQ ticket queue behind it.

A Revenue Operations Analyst who splits time between deal desk ownership and the broader Analytics and GTM Technology surface area is describing this exact loop: process the deal, keep the system clean, and surface what the data says next.

What the Revenue Operations Analyst opening asks for, and where the proof sits.

What the role covers

- "Own Deal Desk: end-to-end processing of deals, quote creation, discount review, order form generation, approval routing."*
- "Become an expert in the CPQ system and Salesforce integration. Help design and implement self-service guardrails and automation."*
- "Identify patterns across deal data and surface insights."*

My Proof

- Deal desk ownership:** ran deal-by-deal review against competitive gaps and willingness to pay in Sensata's Bleeders and Leakers program, recovering \$700K+ in margin in 2 quarters.
- CPQ and Salesforce:** set up and run PriceKeel's own CRM, CPQ configuration and deal-approval workflow end to end, including the self-service guardrails this posting asks the seat to design.
- Patterns across deal data:** built the FY2026 Bleeders and Leakers Power BI dashboard, tracing \$433M in margin gaps to specific salespeople and product lines across a \$627M pipeline.
- AI tooling to accelerate deal review:** automate repetitive pricing and forecasting analysis with Claude AI agents as Strategic Marketing III at Applied Materials.

Bleeders and Leakers: the deal-desk discipline behind a \$700K margin recovery.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, with every margin gap traced to a specific deal record before leadership prioritized which ones to fix.

\$433M

Margin Gaps Surfaced

Each gap traced to a salesperson and product line, the deal-level detail Sentry's Analytics pillar needs to be actionable.

53% to 61%

Distributor Margin Lift

Repriced the channel discount logic and documented it so Finance could audit the new terms on sight.

\$700K+

Margin Recovered, 2 Quarters

Recovered deal by deal, negotiating against competitive gaps and each customer's own willingness to pay.

At PriceKeel that same instinct became the system itself: I run the CRM, CPQ and deal-approval workflow, then the audit trail behind it, so the deal and the ledger tell the same story.

What the first month owning Sentry's Deal Desk pillar looks like.

WEEK 1 Learn the deal flow and CPQ Sit with the Revenue Operations team across Analytics, GTM Technology and Deal Desk to walk the current quote-to-approval process, Sentry's CPQ and Salesforce integration, and the existing approval matrix end to end. ----- Why first: the same instinct that had me learn PriceKeel's own deal flow before building anything on top of it.	WEEK 2-3 Own a live deal-review cycle Take ownership of end-to-end deal processing for a cohort of live deals, quote creation through order form generation and approval routing, while documenting the deal desk playbook as I go. ----- Why now: the same deal-by-deal review discipline behind the Bleeders and Leakers recovery.	WEEK 4 Automate one manual guardrail Identify one recurring manual step in the approval or discount-review cycle and build the self-service guardrail that removes it. ----- Why this fast: streamlining and automating the process is only credible once someone has run it by hand first.
---	--	---

CLOSE

You are hiring someone who splits time across deal desk ownership and the broader RevOps surface. I already run both halves.

The core proof is Sensata: **\$700K+ in margin recovered in 2 quarters** through deal-by-deal review, distributor margins lifted **from 53% to 61%**, and a Power BI system that tracked 1,200 opportunities against a **\$627M target**, run cross-functionally with Sales, Finance and senior executives.

What is harder to find is someone who has also built the CPQ and deal-approval system from the other side of the desk. **I built that at PriceKeel**, so the quote-to-approval discipline this role owns is not something I would need to learn on the job.
