Hiring Team, GHX

Your posting asks for someone to own the full SKU lifecycle in CPQ, from catalog to pricing rules to approval workflows, and make it the connective tissue between Product, Sales, Deal Desk and Finance. I built that exact system at PriceKeel: I run our CRM and CPQ end to end, set the pricing rules and approval workflows, and designed the audit trail that gives Finance evidence for every discount exception instead of a Slack thread. That is the same governance gap a commercialization playbook is meant to close, and it is the part of the job I already do daily, not a system someone else configured for me.

Before PriceKeel, I built the FY2026 Bleeders and Leakers dashboard at Sensata: a Power BI system ranking 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, tracking realized price versus list and discounting patterns to surface $433M in margin gaps for leadership to prioritize. That is the same SKU and catalog rationalization instinct your audit calls for: find where the catalog is bleeding margin, then turn the finding into a recommendation Sales and Finance can actually act on, not just a chart.

The part of that work I enjoy most is the handoff. Recovering $700K+ in margin in two quarters meant negotiating with Sales on what a customer would accept and with Finance on what the model would support, then documenting the rule so it held past the quarter it was fixed in. Raising distributor and channel-partner margins from 53% to 61% worked the same way: repricing the catalog logic itself instead of a one-time hike that drifts back by next quarter. Building trust across functions without owning any of them by title is a muscle, and I have spent two pricing roles building it.

At Applied Materials now, I automate the recurring parts of pricing and forecasting analysis with Claude-based AI agents, the same automation-first bias your posting asks for in SKU and commercialization processes. It is how I actually do the work day to day, not a side experiment I would need to ramp into.

What I bring beyond the resume is PriceKeel itself: a product built specifically to replace legacy CPQ and deal-desk sprawl with one governed, auditable process, which is the same transformation a complex, multi-product SKU catalog needs at GHX's scale.
