PITCH DECK | GHX PRICING MANAGER

Your commercialization process needs one owner for SKUs, CPQ and discount governance at once. I already run that loop, for a pricing platform I built myself.

SKU-to-CPQ governance, catalog rationalization and pricing analytics from someone who builds this exact tooling on the side.

- **$433M** margin gaps surfaced via Sensata's catalog-pricing Power BI dashboard
- **$700K+** margin recovered in 2 quarters, Bleeders and Leakers program
- **53% to 61%** distributor margin lift via repriced catalog logic
- **PriceKeel** - founder who owns a CRM/CPQ, pricing rules and deal-approval system
- **Claude AI agents** automating recurring pricing analysis today

WHY THIS DECK EXISTS

The problem is not that GHX lacks pricing data. It is that SKUs, pricing rules and discount approvals live in three different places, so no one owns the whole commercialization loop.

What owning commercialization at a multi-product platform runs into

A SKU library that grows faster than its governance: every new offering needs requirements, pricing rules and approval workflows before anyone can sell it, and a missed rule shows up as an in-flight contract exception months later.

CPQ configuration, discount approvals and pricing strategy sit in different teams' heads, Product, Sales, Deal Desk, Contract Ops and FP&A, so a process only scales if all of them can work off the same source of truth.

Catalog rationalization is a one-time audit until someone builds the governance that keeps it rationalized: naming conventions, intake workflows and hygiene reviews that outlive the audit itself.

What I have already run, building this exact system

At **PriceKeel**, I set up and run the company's own CRM and CPQ, pricing rules, deal approvals and forecast and pipeline reviews, the same SKU-to-CPQ loop this role owns end to end.

I designed the **audit trail** that gives Finance evidence for every discount exception, selling it against legacy CPQ and deal-desk tooling, the same governance gap a commercialization playbook exists to close.

At **Sensata**, I built a BU-wide Power BI system ranking 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, the same catalog-and-discount rationalization instinct a SKU audit asks for.

A Product Commercialization Manager who owns the SKU lifecycle in CPQ, rationalizes the catalog with real sales and discounting data, and builds the governance that keeps it rationalized, is describing one connected loop. I have built that loop twice: once inside a company's pricing organization, once as the founder who had to build the tooling from scratch.

THE REQ, MAPPED

What the Product Commercialization Manager opening asks for, and where the proof sits.

What the role covers

> *"Own the full SKU lifecycle in CPQ... including product catalog management, pricing rules, approval workflows, and SKU configuration."*

> *"Lead a structured cross-functional SKU audit... analyze historical sales data and discounting patterns, rationalize the catalog."*

> *"Quantify the revenue, margin, and ARR/MRR impact of proposed pricing and SKU changes before release."*

> *"Own the AI and automation innovation roadmap for SKU and commercialization processes."*

My Proof

SKU lifecycle, pricing rules, approval workflows: own PriceKeel's CRM/CPQ end to end, including pricing rules and deal approvals, plus the audit trail that documents every discount exception for Finance.

Catalog audit, sales and discounting analysis: built Sensata's Bleeders and Leakers dashboard, 1,200 opportunities ranked against a $627M target, surfacing $433M in margin gaps by product line.

Quantify revenue and margin impact: recovered $700K+ in margin in 2 quarters and raised distributor margins from 53% to 61% by repricing the catalog logic itself, not a one-time hike.

AI and automation roadmap: automate recurring pricing analysis today at Applied Materials with Claude-built AI agents, the same automation-first bias this role asks for in CPQ and commercialization.

THE SENSATA PROOF, IN DEPTH

Bleeders and Leakers: find the margin leak in the catalog, close it, make the fix hold.

Built as a BU-wide Power BI system covering 1,200 pricing opportunities against a $627M target across 3 regions, 4 product families and 20 product lines, with pipeline funnel, win rate and stage distribution by region and product line, the same catalog-depth analysis a SKU rationalization audit runs at.

$433M

Margin Shortfall Surfaced

Ranked every pricing opportunity by competitive gap and customer willingness to pay so leadership could prioritize which SKUs and product lines to fix first, instead of chasing anecdotes.

$700K+

Margin Recovered in 2 Quarters

Closed through cross-functional negotiations with Sales and Finance built on competitive analysis, SKU by SKU, not an across-the-board price hike.

53% to 61%

Distributor Margin Lift

Repriced the channel logic itself inside the catalog, so the gain outlived the initial fix instead of drifting back within a quarter.

The same BU also ran a financial model flagging line items where a price change could lift profitability more than 50%, and multimillion-dollar customer quotes built alongside senior executives on the business's most strategic accounts. The common thread: every fix was traced to a specific SKU or product line, and every fix was measured after it shipped.

FIRST 30 DAYS

What the first month owning GHX's commercialization process looks like.

WEEK 1

Map the SKU and discount surface

Pull the last quarter's SKU creation requests, discount exceptions and pricing changes by product line. Sit with Product Management, Deal Desk, Contract Ops and FP&A to hear where the current CPQ setup breaks down on a real deal.

Why first: the leak is usually visible in the data before anyone has named it out loud. Same move that started the Bleeders and Leakers program.

WEEK 2-3

Audit and pressure-test

Run a structured SKU audit against historical sales and discounting data, rationalize the top offenders, then document the governance, naming conventions, intake workflow and approval rules, that keeps the catalog clean after the audit ends.

Why now: modeling against a hard target, then verifying the fix cross-functionally, is what made the 53% to 61% distributor gain stick instead of drifting back.

WEEK 4

Ship the playbook, start the automation roadmap

Turn the audit into the commercialization playbook's first version, the single source of truth for pricing, SKUs and business rules, and flag the first AI/automation opportunity in CPQ worth prioritizing.

Why this fast: a playbook only earns adoption once it saves someone a real decision, the same instinct behind PriceKeel's audit trail.

CLOSE

You are hiring the owner of one commercialization loop: SKUs, CPQ, discounting and governance together. I already run that loop for a pricing platform I built from scratch.

The core proof is Sensata: **$700K+ in margin recovered in 2 quarters**, distributor margins lifted **from 53% to 61%**, and **$433M** in margin gaps surfaced across 1,200 pricing opportunities ranked against a $627M target, all traced to specific SKUs and product lines.

What is harder to find is someone who has also spent the last several months building the CPQ, pricing-rules and discount-governance system a commercialization team eventually wants internally. **I am building that at PriceKeel right now**, so the systems-oriented rigor this role asks for is not something I would need to develop on the job.
