Hiring Team, Levelpath

At Sensata I owned go-to-market for a new line of sensing products across North America and Europe, writing the positioning that turned technical capabilities into a buyer value story and building the sales enablement that came with it. That launch drove $2M+ in first-year revenue and a 30% lift in contested-deal win rates once the field had the messaging and case studies behind it. That is the same motion your Product Marketing seat runs: own the message end to end, then prove it holds up when a rep is in the room.

The competitive intelligence behind those launches was mine too. I ran competitor and customer analysis across EMEA and the US, turning purchasing patterns and competitor share into the kind of win/loss signal that changes a positioning call rather than sitting in a deck nobody reopens. I did that work without a reporting line into Product or Sales: 30+ customer interviews with OEM and distributor buyers fed straight into roadmap prioritization, and every launch's go-to-market plan moved through Product, Sales and Brand before a rep ever saw it. That is the cross-team influence your req is describing, just inside industrial sensing instead of procurement software.

At Applied Materials I now turn multi-product-group market sizing into one view that Sales, Engineering and Accounts act on directly, clearing the repetitive analysis work with AI agents built on Claude so more time goes into the story itself. The pattern underneath procurement software is the one I keep running: read what a buyer actually weighs before they commit, build the message around it, and hand the field a case study they can repeat without you in the room.

I would welcome fifteen minutes to walk through how the Sensata launch motion and the Applied Materials market-sizing work map onto Levelpath's product line. Proof trail at adhi-product-ai.vercel.app/ref/levelpath.
