Hiring Team, Cisco

Your Partner Incentive team is trying to solve a problem I already solved at smaller scale: making sure the economics flowing through a channel actually reward the behavior you want from it. At Sensata, I rebuilt how parts sold through distribution were priced and raised distributor and channel-partner margins from 53 percent to 61 percent in under two quarters. That is a distribution-compensation result, not a marketing one, and it is the same kind of rebate and incentive-logic problem your team runs at a much larger scale.

The posting asks for someone who can own a product roadmap over a 6 to 12 month horizon with minimal guidance, and that is also where I spend most of my time. I defined and executed the product roadmap for Sensata's sensor solutions across automotive and industrial segments, managing a backlog of 100+ features in Agile with Engineering across 3 regions, which cut releases 25 percent faster and time to market 20 percent. I ran 30+ customer interviews with OEMs and distributors to pull that prioritization straight from the field rather than from a spreadsheet, and I built the executive-facing models, AP26 revenue scenarios and multimillion-dollar customer quotes that got those calls approved.

Your team description also names AI-driven automation as part of how it runs. At Applied Materials now, I automate the repetitive parts of forecasting and market-sizing work with AI agents built on Claude, freeing up time for the actual pricing and roadmap decision instead of the same recurring number-crunching. I partner daily with Sales, Engineering and Accounts to turn field and technical input into one forecasting view, which is the same cross-functional bridge this role asks a product manager to hold between product teams, partner groups and leadership.

What I bring beyond the resume is the system-building side of that same work. I built the FY2026 Bleeders and Leakers Power BI dashboard that tracked 1,200 pricing opportunities against a $627 million target across 3 regions, 4 product families and 20 product lines, the kind of reporting and data-governance backbone a rebate and incentive-compensation program runs on every day. I would like to bring both sides to this role, the operator who has already closed a margin gap at scale, and the builder who thinks about how to make that process repeatable the next time. Proof trail at adhi-product-ai.vercel.app/ref/cisco.
