Hiring Team, OpenAI

Your industry marketing function exists to answer one question for every sector: what does this capability actually mean for the way we work. I have spent the last two years answering that exact question for industrial and semiconductor buyers, not abstractly but inside real go-to-market programs. At Sensata I owned positioning, pricing, channel and launch for new sensing products across North America and Europe, grounded in 30+ customer interviews with OEMs and distributors who told me which capability actually mattered on their floor. That program drove \$2M+ in first-year revenue, and the narrative held up because it was built from the buyer's problem, not the spec sheet.

Positioning only survives contact with a field team if the enablement is built for them, not at them. I built sales enablement, decks and reusable playbooks for 50+ reps and coached account teams on how to use them, lifting win rates 30%. I also ran competitor and customer analysis across EMEA and the US to decide where the next quarter's marketing investment should go, and built the KPI frameworks in SQL and GA4 that let us track whether a program actually moved the number, not just shipped. That is the operating rhythm I would bring to building GTM programs in an environment that is still being defined.

I also live inside the tools this role is meant to market. I automate recurring research and analysis with Claude AI agents as Strategic Marketing III at Applied Materials, carrying P&L targets for the role, and I built a production AI product end to end on the OpenAI API, from the first user interview through onboarding 50+ early users. Translating a model capability into something a non-technical buyer can act on is not new work for me, it is the habit I already practice.

What I would bring to this seat is a marketer who has already run the full loop this posting describes, industry-specific positioning, field enablement, and GTM programs in ambiguous conditions, on technical products most buyers do not instinctively understand. I would welcome fifteen minutes to talk through how that maps to the sectors you are prioritizing first. Proof trail at adhi-product-ai.vercel.app/ref/openai.
