

PITCH DECK | OPENAI INDUSTRY PRODUCT MARKETING MANAGER

Every sector needs a different answer to "what does this mean for me." I have been building that answer for industrial and semiconductor buyers, at revenue-bearing scale, for two years.

Industry-specific positioning, field enablement, and GTM programs run in ambiguous conditions.

\$2M+ first-year revenue from an industry-specific GTM program at Sensata

30+ customer interviews behind every positioning decision

+30% rep win rate from field enablement built for 50+ reps

Claude AI agents automating recurring research today

Shipped a production product on the **OpenAI API**

A single generic narrative about AI does not land in a factory the same way it lands in a design studio. Every sector needs its own translation, built on real field evidence.

What the role actually asks for

Develop industry-specific positioning, narratives and messaging that translate product and research capability into practical value for each target sector.

Build and run GTM programs and operating rhythms in a fast-moving, ambiguous environment, partnering across Product, GTM, Comms, Partnerships and Customer Success.

Use customer evidence, usage data, market research and competitive context to sharpen strategy and decide where investment goes next.

What I have already run

At **Sensata**, I built industry-specific positioning for industrial and automotive buyers from **30+ customer interviews** with OEMs and distributors, driving **\$2M+ first-year revenue**.

I built **field enablement and reusable playbooks** for 50+ reps, the partner-facing half of this role, lifting win rates 30%.

I run operating rhythms (weekly and quarterly reviews) across every seat I have held, and I automate recurring research with **Claude AI agents** today.

The translation this role asks for, deep technical capability into a narrative a non-technical buyer can act on, is the exact job I have been doing in semiconductors and industrial sensing.

What the Industry Product Marketing Manager opening asks for, and where the proof sits.

What the role covers

- "Develop industry-specific positioning, narratives, and messaging that translate OpenAI's products and research into practical value for target sectors."*
- "Partner with GTM, sales, and customer teams to build and refine industry playbooks, enablement material, and field assets."*
- "Build and run GTM programs and operating rhythms in a fast-moving, ambiguous environment."*

My Proof

- Sensata industry positioning:** owned GTM end to end for new sensing products in industrial and automotive sectors, grounded in 30+ customer interviews, driving \$2M+ first-year revenue.
- Field enablement at scale:** playbooks and decks for 50+ reps, +30% win rates, the cross-functional field-asset half of this posting.
- Operating rhythm under ambiguity:** weekly and quarterly business reviews running P&L-owning programs at Applied Materials, Sensata, Plug Power and Pixis.
- AI fluency in practice:** automate recurring analysis with Claude agents at Applied Materials, and shipped a production product end to end on the OpenAI API.

Industry GTM in practice: research the sector, write the narrative, arm the field, track the number.

Owned positioning, pricing, channel and launch for new sensing products across North America and Europe, one industry narrative built from 30+ customer interviews with OEMs and distributors, not a single generic pitch.

The same cycle ran competitor and purchasing-pattern analysis across EMEA and the US to decide where the next quarter's marketing investment should go, then reported program effectiveness back to leadership every quarter.

What the first month building out one industry vertical looks like.

WEEK 1 Learn the sector from the field Sit with GTM, sales and Customer Success to hear how the target sector currently understands OpenAI's products, and where the narrative breaks down for a non-technical buyer. Why first: the same move that grounded the Sensata launch: find the real pain point before writing the positioning.	WEEK 2-3 Write the narrative and the field asset Turn the sector's real workflow into clear positioning and a usable playbook, drafted with AI tools for speed so more time goes into the judgment calls on accuracy and credibility. Why now: the industry-specific positioning and field enablement this posting asks for, built with the AI-native workflow I already run daily.	WEEK 4 Arm the field and set the measurement Hand the playbook to GTM and customer teams, pair it with usage-data and competitive signal, and set the reporting rhythm that tracks whether the program is actually moving adoption. Why this fast: a narrative only counts once a field team is running it and the number is being tracked.
--	--	--

CLOSE

You are hiring someone to translate technical capability into sector-specific value, arm the field, and run GTM programs in ambiguity. I have already run all three, together, on technical products.

The core proof is Sensata: **\$2M+ first-year revenue** from an industry-specific GTM program, **+30% field win rate** from enablement built for 50+ reps, and **30+ customer interviews** behind every narrative decision.

What is harder to find is someone already running that playbook on an AI-native product: I automate research with **Claude AI agents** daily and have **shipped on the OpenAI API** myself, so the AI fluency this posting asks for is a current habit, not a claim.
