

PITCH DECK | OPENAI LIFECYCLE MARKETING MANAGER, SMB ADS

This is a zero-to-one lifecycle build. I have built a triggered lifecycle flow from nothing before, for an SMB-sized paid budget, and cut cost per lead 50% doing it.

Triggered journeys, cohort segmentation and onboarding programs, proven on an 8-client SMB portfolio and a lead flow built from scratch.

Built the **Pardot/WordPress triggered lead flow from scratch** at Plug Power, cost per lead -50%

50% churn cut across an 8-client, \$15K-\$90K/month SMB portfolio at Pixis

+35% qualified leads from lifecycle nurture campaigns at Sensata

Cohort segmentation in **SQL + GA4** lifting feature adoption 18%

Claude AI agents automating workflows today; shipped onboarding on the **OpenAI API**

This req is not "run an existing lifecycle program." It is "build the lifecycle programs from the first customer on." I have done that exact build before.

What the role actually asks for

Own the lifecycle portfolio across prospect conversion, activation, retention, repeat spend, reactivation and expansion, and build the segmented, triggered journeys from scratch.

Lead prospect nurture and email acquisition, then launch onboarding and education programs that move advertisers to first campaign and repeat spend.

Define data signals, segmentation, instrumentation and measurement with Data Science and Marketing Ops, and use AI to scale the programs that work.

What I have already built

At **Plug Power**, there was no lead-nurture flow when I arrived. I built the **WordPress + Pardot triggered sequence from scratch**, cutting cost per lead **50%**.

At **Pixis**, I ran an **8-client, \$15K-\$90K/month SMB portfolio** end to end: activation, retention playbooks and winback plays that cut churn **50%**.

At **Sensata**, I segmented usage cohorts in **SQL and GA4** across 50K+ devices, lifted feature adoption **18%**, and ran lifecycle nurture campaigns that drove **+35% qualified leads**.

The zero-to-one framing in this posting is not new to me. Plug Power's lead flow and SwipeHire's onboarding flow were both built from an empty state, not inherited and tuned.

What the Lifecycle Marketing Manager, SMB Ads opening asks for, and where the proof sits.

What the role covers

- "Build segmented, triggered journeys that connect advertiser needs, intent, readiness and behavior to relevant messages and next steps."*
- "Launch onboarding and education programs that help advertisers create campaigns, understand performance, adopt capabilities and grow their investment."*
- "Hands-on experience with CRM and marketing automation platforms, such as Marketo or comparable tools, including journey logic and personalization."*

My Proof

- Triggered journey, built from zero:** the Pardot + WordPress lead-nurture sequence at Plug Power, designed and shipped with no prior flow in place, cost per lead -50%.
- Onboarding and activation, SMB-sized:** the SwipeHire signup-to-first-match flow for 50+ early users, 8+ A/B tests and 12+ interviews, activation +25%.
- CRM and automation, hands-on:** Pardot, HubSpot and Salesforce builds, lead scoring, MQL/SQL handoff and journey QA, the same journey-logic skillset a Marketo program runs on.
- Cohort and segmentation depth:** SQL + GA4 usage cohorts at Sensata, Amplitude + Tableau behavior segments at Pixis across 30+ campaigns.

An SMB advertiser portfolio and a lead-nurture flow, both run end to end: build the journey, segment the audience, prove it in the data.

At Pixis, hired and managed an 8-person team running retention strategy for 8 SMB-sized advertiser accounts at \$15K-\$90K/month each, carrying P&L targets and building reactivation playbooks on account-health signals and channel diversification.

50%

Churn Cut (Pixis)
Through account-health signals, channel diversification and vertical-specific winback plays, the reactivation motion this role is built to run.

50%

Cost Per Lead (Plug Power)
From building the WordPress + Pardot triggered nurture sequence from an empty state, the exact zero-to-one lifecycle build this req describes.

18%

Feature Adoption (Sensata)
From segmenting 50K+ connected devices into usage cohorts in SQL and GA4 to find and message the high-intent accounts first.

The same discipline runs at Sensata: lifecycle nurture campaigns across North America and Europe drove +35% qualified leads, and 30+ customer interviews mapping the buyer journey raised CSAT 22%, both feeding directly into messaging and journey design.

What the first month owning the SMB Ads lifecycle portfolio looks like.

WEEK 1 Map the advertiser journey Sit with Product, Data Science and Ads Engineering to map the journey from first interest through first campaign to repeat spend, using cohort analysis to find where advertisers stall. Why first: the same move that grounded the Sensata cohort work: read the behavior signals before building the sequence.	WEEK 2-3 Build the first triggered journey Design and ship the first segmented, triggered sequence against the sharpest drop-off point, with suppression, consent and deliverability built in from the start, not bolted on after. Why now: the same build-from-zero move as the Plug Power lead flow: no inherited sequence, no shortcuts on journey quality.	WEEK 4 Launch an onboarding program Package the first wins into an onboarding and education sequence that moves advertisers to first campaign faster, with a holdout group in place to measure incremental lift, not just engagement. Why this fast: the same signup-to-first-action flow I built for SwipeHire, now at SMB-advertiser scale.
--	--	---

CLOSE

You are hiring someone to build lifecycle programs for SMB advertisers from the ground up. I have already built that exact kind of program, from zero, more than once.

The core proof is Plug Power: a **triggered lead-nurture flow built from scratch**, no prior sequence in place, cutting **cost per lead 50%**. Pixis adds the retention half: an **8-client, \$15K-\$90K/month SMB portfolio** with a **50% churn cut** through segmented winback plays.

What is harder to find is someone who has also **segmented usage cohorts in SQL and GA4** to drive a qualified-lead lift, and who runs **Claude AI agents** today to automate the analysis this role asks for.
