Hiring Team, Supermicro

Your Key Components posting asks for one motion: take customer input, market forces and competitive pressure and turn them into product requirements, then carry those requirements across the full lifecycle. I ran that exact motion at Sensata Technologies, where I owned the roadmap for new sensing hardware, converted 30+ OEM and distributor interviews into a 100+ feature backlog, and worked it through Engineering in Agile across 3 regions to cut time-to-market 20%.

The vendor and distributor side of the role is where I have spent real hours negotiating, not just describing. At Sensata I repriced parts sold through distribution and raised distributor and channel-partner margins from 53% to 61% in under two quarters, work built directly on competitive gaps and partner economics. The data modeling half shows up the same way: I built the FY2026 Power BI dashboard that tracked 1,200 pricing opportunities against a \$627M target across 3 regions, 4 product families and 20 product lines, the kind of analytical and strategic groundwork your posting names directly.

"Provide product subject matter expertise and leadership to sales team training" is a line I can point to a number against. I trained 50+ Sensata sales reps as the product SME behind new sensing hardware, building the case studies and decks that lifted win rates 30%. At Applied Materials today I size the semiconductor equipment market with Sales, Engineering and Accounts, turning technical and field input into one requirements view, and I have automated the recurring forecasting reporting with AI agents built on Claude so the time goes into the next requirements cycle instead of rebuilding the last report.

Server and workstation hardware runs on the same discipline I have already applied to sensing components and semiconductor equipment: requirements built from the people closest to the customer and the competitor, carried through to a sales team that can sell them. I would like to bring that to Key Components at Supermicro. Proof trail at adhi-product.vercel.app/ref/supermicro.
