Hiring Team, Walmart

Your competency list for this role opens with being a trusted advisor, someone business partners turn to for market research and a clear read on where a product should go next. That was the job itself at Sensata: competitor and customer analysis across EMEA and the US surfaced real revenue opportunities in purchasing patterns and market share, and I turned that research into a go-to-market plan, positioning through launch, that produced $2M+ in first-year revenue.

Advising business units without owning them is a specific skill, and it is the one I have built most deliberately. At Sensata I took multimillion-dollar customer quotes and AP26 revenue models directly to senior executives, and the battle cards and case studies I built for 50+ reps lifted their win rates 30% without my name on a single deal. At Applied Materials I carry that same advisor role now, sizing the semiconductor market alongside Sales, Engineering and Accounts and turning the resulting analysis into forecasts leadership can act on, work I now run partly through Claude AI agents so the research keeps pace with how fast the market moves.

The retail and digital-media side of this role is not new ground either. At Pixis I ran retail media campaigns on Amazon Ads and Criteo for an 8-client, $15K-$90K-per-month portfolio, and I already hold a Walmart Ads certification from building that same discipline toward your own platform. Pairing that retail-execution habit with the market-sizing work I did on 170 facilities down to a focused SAM of 28 for Safran is, I think, the actual shape of this role: research sharp enough to act on, and the credibility to get a business unit to act on it.

I would like to put that research-to-GTM discipline behind a company operating at Walmart's scale, where a market-research call that is one point off moves real numbers. Proof trail at adhi-product.vercel.app/ref/walmart.
