Hiring Team, Envoy

Your posting splits this role cleanly into inbound and outbound, and most PMM candidates are strong on one half. I have run both at the same time on the same launch. At Sensata, I architected the GTM for a new sensing-product line end to end: the narrative, the launch tiering framework, the cross-functional workbacks, and the sales-facing motions underneath it, battlecards, decks and rep training for 50+ reps. That launch drove $2M+ in first-year revenue and moved win rates 30%. It is the same two-sided mandate your "You will" list describes, not two separate jobs bolted together.

The inbound half was never a spec-sheet exercise either. I ran 30+ structured win/loss interviews with OEM and distributor buyers before anything shipped, which is where the positioning actually came from, and those interviews fed the post-launch retrospective that updated the next launch's playbook. That same research habit, not a one-time competitive landscape doc, also produced the pricing and packaging recommendations I built as Pricing Lead: benchmarking across 10+ competitors behind a 12% YoY price realignment. Your posting asks for someone who treats win/loss review and competitive intelligence as a running discipline. That has been my actual job, twice.

I notice the role sits at the intersection of security, compliance and physical-space operations, categories most SaaS PMMs have not touched. My own buyers have been compliance-driven and regulated in a different direction, OEM and distributor engineering teams at Sensata, the semiconductor supply chain at Applied Materials, where the sale depends on trust in the data and the audit trail behind it as much as the feature list. That is close to what "unifying people, spaces, and communications in one secure, integrated platform" is actually selling: a buyer who needs to trust the system before they will put their name on the compliance line.

On AI tooling specifically: at Applied Materials I built my own agents on Claude to automate the competitive and market analysis I used to do by hand, because a PMM function that rebuilds the same report every cycle is not scaling. That is the instinct I would bring to Envoy's in-product comms, release notes and recurring GTM reporting from day one. Proof trail at adhi-product-ai.vercel.app/ref/envoy.
