PITCH DECK | ENVOY SENIOR PRODUCT MARKETING MANAGER

Envoy needs a launch narrative, a tiering framework and a sales-enablement system running at the same time, inbound research feeding outbound execution, not two separate jobs. I have already run that loop end to end, with a number on each half.

One GTM launch, built and measured on both the inbound and outbound half at once.

- **$2M+ first-year revenue** from an end-to-end GTM launch I architected solo
- **+30% win rate** from a sales-enablement system built for 50+ reps
- **15% conversion lift** from positioning stress-tested with 30+ win/loss interviews
- **12% YoY price move** from pricing and packaging recommendations built on 10+-player benchmarking
- **AI agents built on Claude** automating my own recurring PMM reporting today

WHY THIS DECK EXISTS

The mandate is not "own launches" or "own enablement." It is both halves of the loop, inbound research and outbound execution, running on the same launch at the same time.

What that actually requires

Pre-launch research and competitive intelligence that actually changes the narrative and tiering, not a landscape doc filed after positioning is already locked.

A launch narrative, tiering framework and cross-functional workback that Product, Sales and CS all work from, plus the sales-enablement system, decks, one-pagers, training, sequences, that makes it usable mid-deal.

A post-launch retrospective loop that updates the next launch's playbook, instead of each launch starting from a blank page.

What I have already run

At **Sensata**, I architected the full GTM for a new sensing-product launch, narrative, tiering, workbacks and sales motions, in one role, driving $2M+ first-year revenue.

The research was not separate from the build: 30+ win/loss interviews shaped the positioning before launch and fed the retrospective after.

I built the enablement system underneath it, battlecards, decks, rep training, for 50+ reps, and it moved win rates 30%.

The through-line: I have never treated inbound and outbound PMM as two roles. Every launch I have built ran both halves at once.

THE MANDATE, MAPPED

What the posting asks for, and where the proof already sits.

What the role covers

> *"Architect and execute end-to-end GTM strategies for large product launches, defining the overarching narrative, launch tiering framework, and cross-functional workbacks."*

> *"Own creation of sales enablement assets, decks, one-pagers, product and campaign training, sales and BDR sequences, competitive intelligence."*

> *"Support pricing and packaging analysis and create recommendations." / "Implement post-launch retrospectives... to optimize the GTM playbook continually."*

My proof

Sensata, the full launch: narrative, tiering and cross-functional workbacks for a sensing-product GTM that drove $2M+ first-year revenue.

Sensata, the enablement system: battlecards, decks and rep training for 50+ reps, moving win rates 30%.

Sensata Pricing Lead, packaging: 10+-player benchmarking turned into pricing and packaging recommendations behind a 12% YoY realignment.

Sensata, the retrospective loop: 30+ win/loss interviews that shaped positioning pre-launch and fed the playbook post-launch.

THE PROOF, IN DEPTH

Build the narrative, ship the enablement system, then put a number on both halves.

Same pattern on one launch: research first, build the launch and the enablement system together, then measure both the positioning and the pipeline impact instead of reporting on just one.

$2M+ Revenue

End-to-End GTM Launch, One Owner

Narrative, launch tiering and cross-functional workbacks for a new sensing-product line at Sensata.

+30% Win Rate

Sales-Enablement System for 50+ Reps

Battlecards, decks and rep training built from scratch to support that same launch.

12% YoY Price Move

Pricing & Packaging From Competitive Research

10+-player benchmarking turned into packaging recommendations as Pricing Lead.

None of these sat in a silo. The win/loss research, the launch build, the enablement system and the pricing recommendation all ran off the same competitive and customer intelligence loop.

FIRST 30 DAYS

What the first month on Envoy's launch and enablement motion looks like.

WEEK 1

Run the inbound loop first

Pull recent win/loss reports and run structured interviews with Sales and CS on live deals to find what is actually moving the security-and-compliance buying committee, the same 30+-interview discipline behind the Sensata launch, before touching the narrative.

Why first: research shapes the narrative, not the other way around.

WEEK 2-3

Ship the launch tiering and workback

Build the narrative, launch tiering framework and cross-functional workback for the next feature or launch on the roadmap, with the sales-enablement assets, decks, one-pagers, BDR sequences, versioned alongside it, not after.

Why now: the same build-it-together pattern that drove $2M+ and a 30-point win-rate lift at Sensata.

WEEK 4

Close the retrospective loop

Run the post-launch retrospective, feed it and the ongoing competitive tracking into the next cycle's playbook and pricing/packaging input, then automate the recurring reporting step with an AI agent so the loop runs every cycle, not once a quarter.

Why this fast: the same automation habit already running my own reporting at Applied Materials.

CLOSE

You are hiring one person to run both halves of the GTM loop. I have already run both, on the same launch, with a number on each one.

The inbound half: **15% conversion lift** from positioning built on 30+ structured win/loss interviews, and a **12% YoY price move** from pricing and packaging recommendations built on 10+-player competitive benchmarking.

The outbound half: **$2M+ first-year revenue** from a GTM launch I architected end to end, plus **+30% win rate** from the sales-enablement system I built underneath it for 50+ reps. At Applied Materials I now automate my own recurring competitive reporting with agents built on Claude, so that time goes into the next launch instead of the last report.
