Hiring Team, Sony Interactive Entertainment

At GenY Medium I rebuilt the Google Merchant Center and Meta catalog feeds for D2C e-commerce brands and took their return on ad spend to 16x. At Pixis I ran the account strategy for an 8-client e-commerce portfolio, cutting churn 50% and restructuring one fashion brand's full funnel, feed cleanup through lookalike expansion, for 3x ROAS in a single month. Those are the same levers your posting names: basket size, repeat purchase, conversion, and the storefront and offer mechanics that feed a commercial KPI framework.

The opportunity-sizing and GTM side runs through the rest of my background. At Sensata I owned the GTM lifecycle for new sensing products across North America and Europe, from positioning through launch, and built KPI frameworks in SQL and GA4 on 50K+ connected devices to turn adoption signals into launch decisions. As Pricing Lead there I built AP26 revenue forecasting models and site-transition business-readiness cases with senior executives, the kind of scenario planning and change work a GTM investment call runs on. At Applied Materials now, I build the forecasting and market-sizing models that turn Sales and Engineering input into one commercial view before it reaches a business case, and I automate the repetitive analysis behind that work with AI agents built on Claude.

What you have described, turning customer and trading insight into a GTM roadmap, then owning it through launch, adoption and continuous optimization, is the loop I have run at e-commerce and industrial scale alike. I would like to bring that to the D2C business behind PlayStation.
