Hiring Team, Amazon Web Services (AWS)

Forward Deployed Engineering and AWS Professional Services are two different motions, embedded delivery versus advisory-led transformation, and the hard part of this role is finding one narrative that respects both without flattening either into the other. The closest I have come to that exact problem is launching a new technical product line at Sensata: new sensing products needed one GTM story that still had to flex into separate positioning, channel and pricing for North America and Europe, and I owned targeting, segmentation, messaging and channel mix end to end rather than handing pieces to different teams. That launch drove $2M+ in first-year revenue and +35% qualified leads.

Direct evidence of fit:

- Owned end-to-end GTM for new Sensata sensing products (positioning, pricing, channel, launch) across North America and Europe, driving $2M+ first-year revenue and +35% qualified leads.
- Armed 50+ reps with sales enablement, first-call decks and case studies built from 30+ customer interviews, lifting win rates 30%.
- Kept enterprise case studies and sales materials current at Pixis, turning real client outcomes into proof points that lifted sales team performance 20%, the same reference-activation muscle this role asks for.
- Built the leadership decks and ran the OKR reviews that kept executives aligned on pricing, launch and competitive calls in every role since, including briefing senior Sensata executives directly on multimillion-dollar customer quotes.

What I bring is practice taking a highly technical capability that the buyer does not build themselves and translating it into a story a non-technical executive will act on, which is the actual mechanics of this req regardless of the underlying product. I am running that same translation right now as Strategic Marketing III at Applied Materials, building value-based pricing for a fast-moving semiconductor market and automating the repetitive side of that analysis with Claude AI agents so the positioning work stays sharp instead of stale. Reading the posting, the hard part is less "explain FDE" and more "get PR, AR, ABM and global field teams pointed at the same launch moment," and that cross-functional choreography is the job I have already been doing, just with different team names attached.

Proof trail at adhi-product-ai.vercel.app/ref/aws if you want to see the GTM and enablement work firsthand.
