Hiring Team, Elevation Capital Portfolio Company

The posting describes a Chief of Staff who runs the company's operating system: goal-setting, the AOP and OKR cadence with department heads, operational excellence, and the dashboards that turn performance data into a decision. At PriceKeel, the company I founded, I run that exact system myself: I own the CRM and CPQ, sit in the forecast and pipeline reviews, sign off on deal approvals, and built the investor narrative now carrying the company through its first fundraising round. Nobody assigned any of that structure; I built it because a growing company needed it and there was no one else to own it.

Before PriceKeel, I partnered with senior executives at Sensata on AP26 revenue models and site-transition strategy for a multi-$100M Industrial BU, running the OKR cadence (weekly and quarterly business reviews) that kept department heads working off one plan. I also led the Bleeders and Leakers program end to end: built a Power BI dashboard that ranked 1,200 pricing opportunities against a $627M target, then closed $700K+ of that gap in 2 quarters through negotiations with Sales and Finance I had no formal authority to compel. That is the same operational-excellence muscle a Chief of Staff's office runs on: a dashboard sharp enough for a leadership meeting, and enough judgment to move a cross-functional room toward a decision.

At Applied Materials now, I turn ambiguous field input from Sales, Engineering and Accounts into one market view, carrying P&L and revenue targets for the role with no formal authority over any of those teams, the kind of strategic project a Chief of Staff is handed without a map. I automate the repetitive half of that analysis with AI agents built on Claude, not because the tool is the point but because the actual job is the judgment call at the end of the dashboard, and that time should go toward the decision, not the formatting.

On the people side, I have hired and managed teams directly: an 8-person account team at Pixis running 8 client relationships, and the team behind SwipeHire, an AI job-matching platform I built zero-to-one. Operating cadence, cross-functional execution without a title to lean on, leadership-ready dashboards, and the hiring work that comes with scaling a team: I have already run all four, just at a different company's scale each time. Proof trail is right here: adhithyabhaskar.vercel.app/ref/elevation-capital-portfolio-co
