Hiring Team, Notion

Your posting draws a hard line between shipping a feature and getting someone to actually notice it, and that line is where I have spent my career. At Sensata I took a new sensing product line from spec to \$2M+ in first-year revenue by writing the positioning that turned dense engineering detail into a story an OEM buyer acted on, not a data sheet nobody read.

The role you are describing runs from early product development through the sales conversation, and I have run that loop end to end. Thirty-plus customer interviews with OEM and distributor engineers told me which capability actually mattered before launch day; the sales enablement decks and case studies I built off that research went to 50+ reps and lifted win rates 30%. Launch day was never the finish line for me. I kept tracking adoption after each release, in SQL and GA4 against 50K+ connected devices, and fed what I found back into the next round of messaging, the same awareness-to-adoption arc your posting describes for What's New and the release channel.

I also bring the habit your note on AI describes. At Applied Materials I automate recurring market and messaging analysis with agents built on Claude, which frees up the time that goes into the sharper judgment call: the headline that actually lands versus the one that is just accurate. I already run my own workflow in Notion day to day, so the product side of this role starts from something I already use, not something I have to learn.

I would like to bring that messaging-to-adoption discipline to Core Product at Notion. Proof trail at adhi-product-ai.vercel.app/ref/notion.
