Hiring Team, Together AI

Your posting names Claude Code and Codex specifically as the tools you want the Infrastructure Strategy team's analyst running on. That is not a ramp for me. At Applied Materials I already run AI agents built on Claude against my own repetitive market-sizing and forecasting work, and I hold the Claude Code 101 certification on top of the daily use.

The site-evaluation half of the role is close to a project I led at Simon Business School: a 5-consultant team analyzing 170 facilities down to a 28-site addressable market, comparing feasibility and pricing across sites for a market-entry decision and presenting the comparison framework to Safran's leadership. That is the same location-versus-vendor-versus-timeline tradeoff work your team runs for data center sites and energy sourcing, just pointed at a different kind of facility.

The tracker half is where I spent the last year. At Sensata I built the FY2026 Bleeders and Leakers Power BI dashboard: 1,200 pricing opportunities tracked against a \$627M target by win rate, dollar per win and stage distribution across 3 regions and 20 product lines. That dashboard surfaced \$433M in margin gaps and let leadership prioritize by salesperson and product line instead of guessing. I also partnered with senior executives on AP26 revenue models and site-transition strategy, running the same Finance and cross-functional loop day to day that your team runs with Infra Eng.

Together AI's compute is scaling across sites and deployment types faster than most infrastructure teams can track by hand, and building the framework that keeps that organized is the kind of problem I want to own next. Proof trail at adhithyabhaskar.vercel.app/ref/togetherai.
